LTC going to the Web

Language Technology Centre, a London-based localisation consultancy firm, announced today the immediate release of the Web version of its LTC Organiser, an enterprise resource management system for the language industry.

LTC Organiser is a comprehensive package which offers client and supplier management, quotation and project management, as well as finance management and reporting, all within one integrated environment.
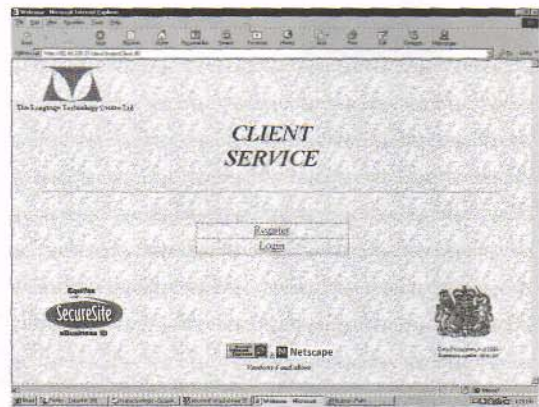

The new Web version of LTC Organiser offers additional functionality, including facilities for distributed project management. LTC Organiser offers clients and suppliers direct access to their own records, from any Web browser connected to the Internet. LTC Organiser is now accessible at any time, from anywhere in the world.

"Distributed project management is one of the decisive strategies to running a successful translation business," said Dr Adriane Rinsche, director of LTC.

"Sophisticated management tools, such as LTC Organiser, are essential for survival in this highly competitive industry."
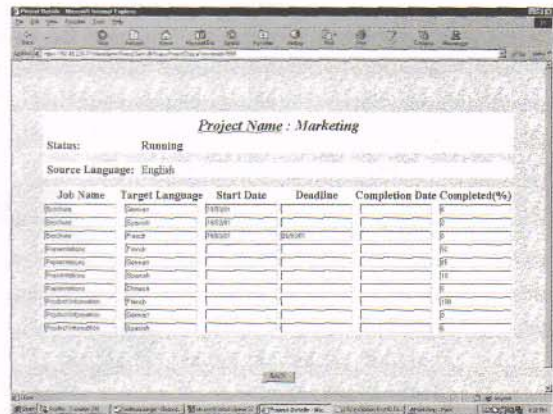

"LTC Organiser has been welcomed by great acclaim within the localisation industry," adds Dr Rinsche.

"We developed the Web version of LTC Organiser in response to many requests from the users of earlier versions of LTC Organiser," she said. LTC estimates that implementation of the LTC Organiser within the multilingual documentation process can reduce overall management time and cost by 50%.

LTC Organiser clients are located all over the world. One of them, BOWNE Translation Services (New York, Paris, and London) said: "We expect to save 50% of our costs."

"Our processes have become much more streamlined and transparent," confirm Deutsche Post (Bonn, Germany).

Praetorius (Leeds, UK) comments: "You don't know what you are missing until you have implemented LTC Organiser in your organisation."

LTC has a joint marketing agreement with ALCHEMY Software Development, developer of Catalyst. The software now includes an interface to TRADOS Translator's Workbench, a leading translation support package. The interface allows Workbench analysis results to be imported directly into LTC Organiser.
