Because we want to provide everyone with access to all the world's information, including information written in every language, one of the exciting projects at Google Research is machine translation... Now you can see the results for yourself. We recently launched an online version of our system for Arabic-English and English-Arabic. Try it out!

### Translated search

Type a search phrase in your language. Google will find results in other languages and translate them for you to read.

Search for:

Translate and Search

Search pages written in:

- Automatically selected languages**
- Specific languages

My language:

[English](#) ▼

- Example:
1. Search for [Bern tourist information](#).
  2. We translate your query into French and German, and find French and German results.
  3. Finally, we translate the French and German results back into your language.

### Translate text

Bienvenue à Le Mans

$p(\text{heads})$

$1 - p(\text{heads})$

$p(\text{heads})?$

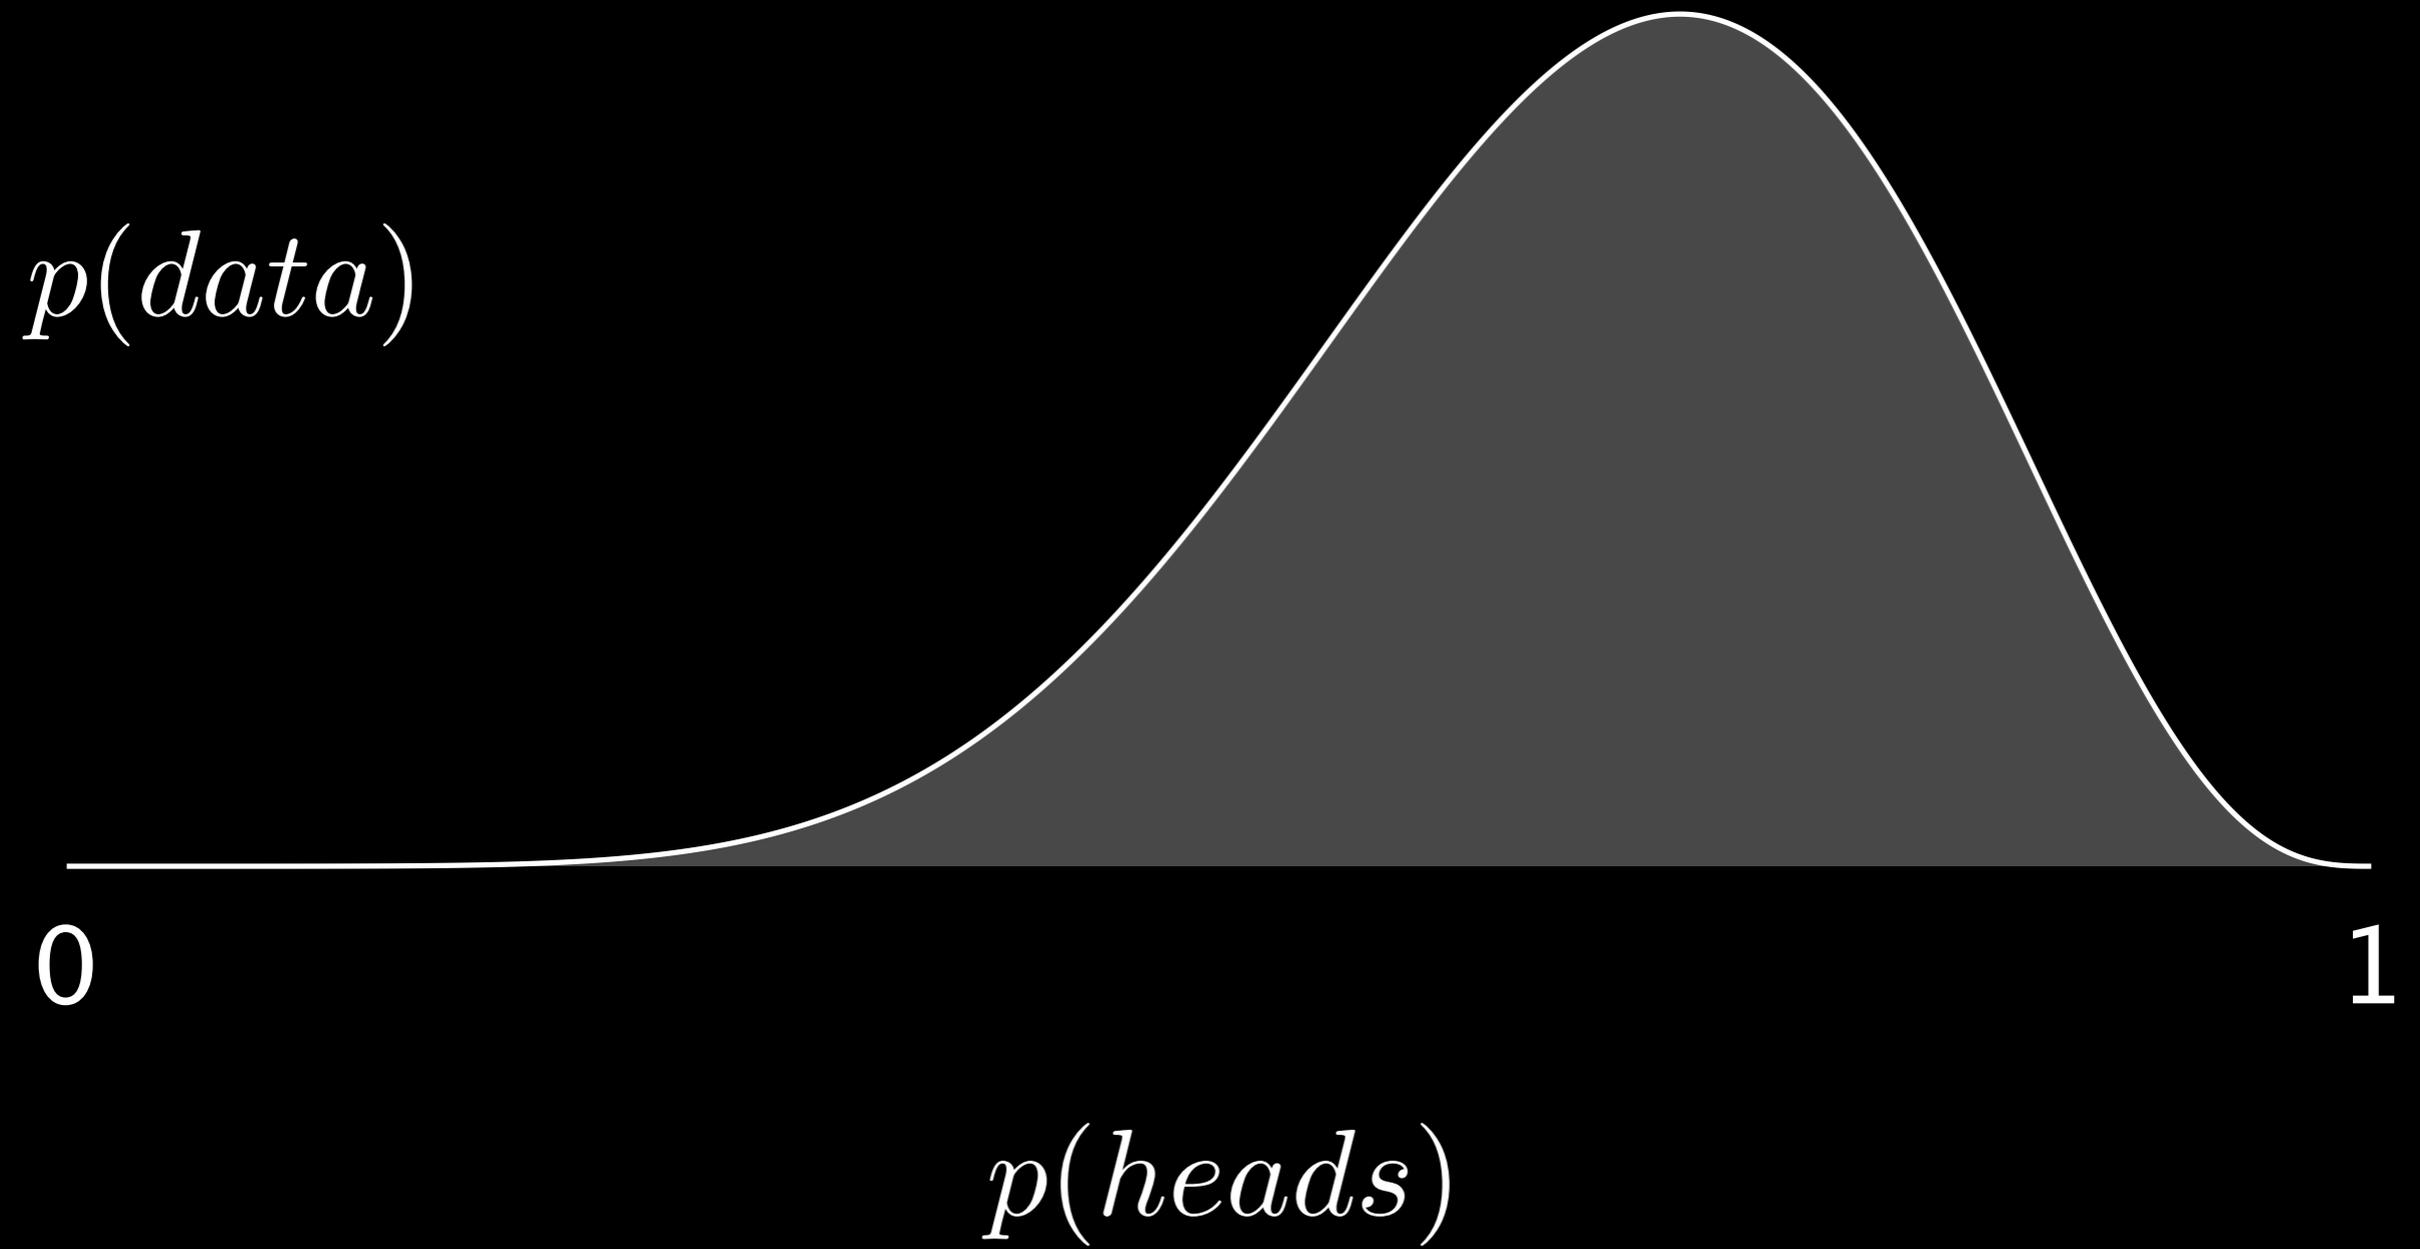

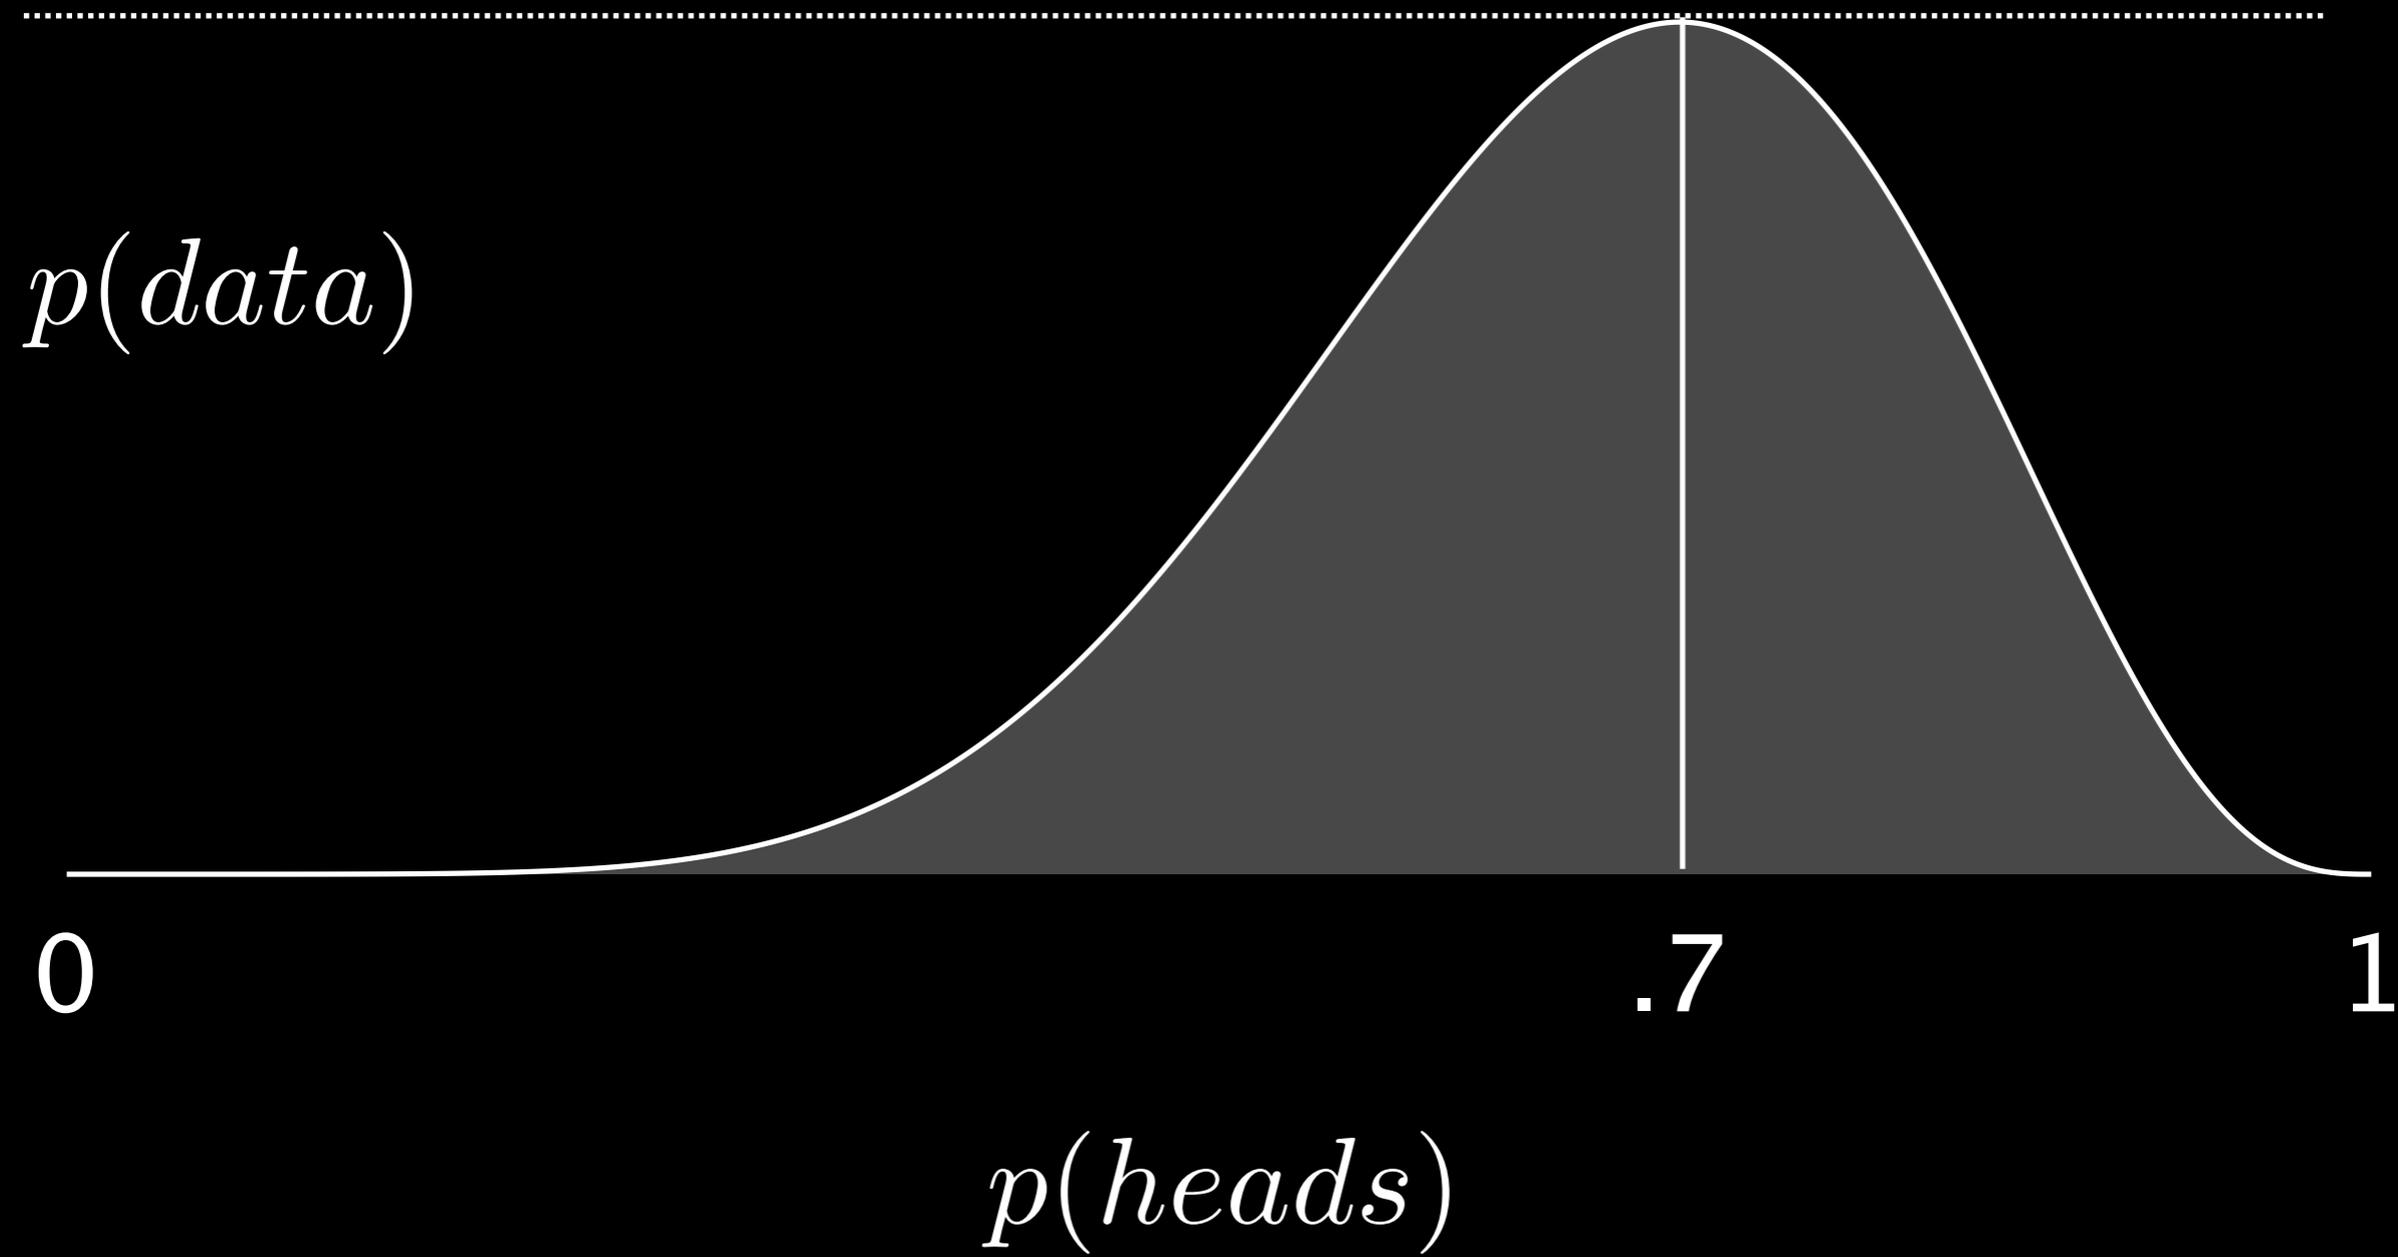

$$p(\text{data}) = p(\text{heads})^7 \times p(\text{tails})^3$$

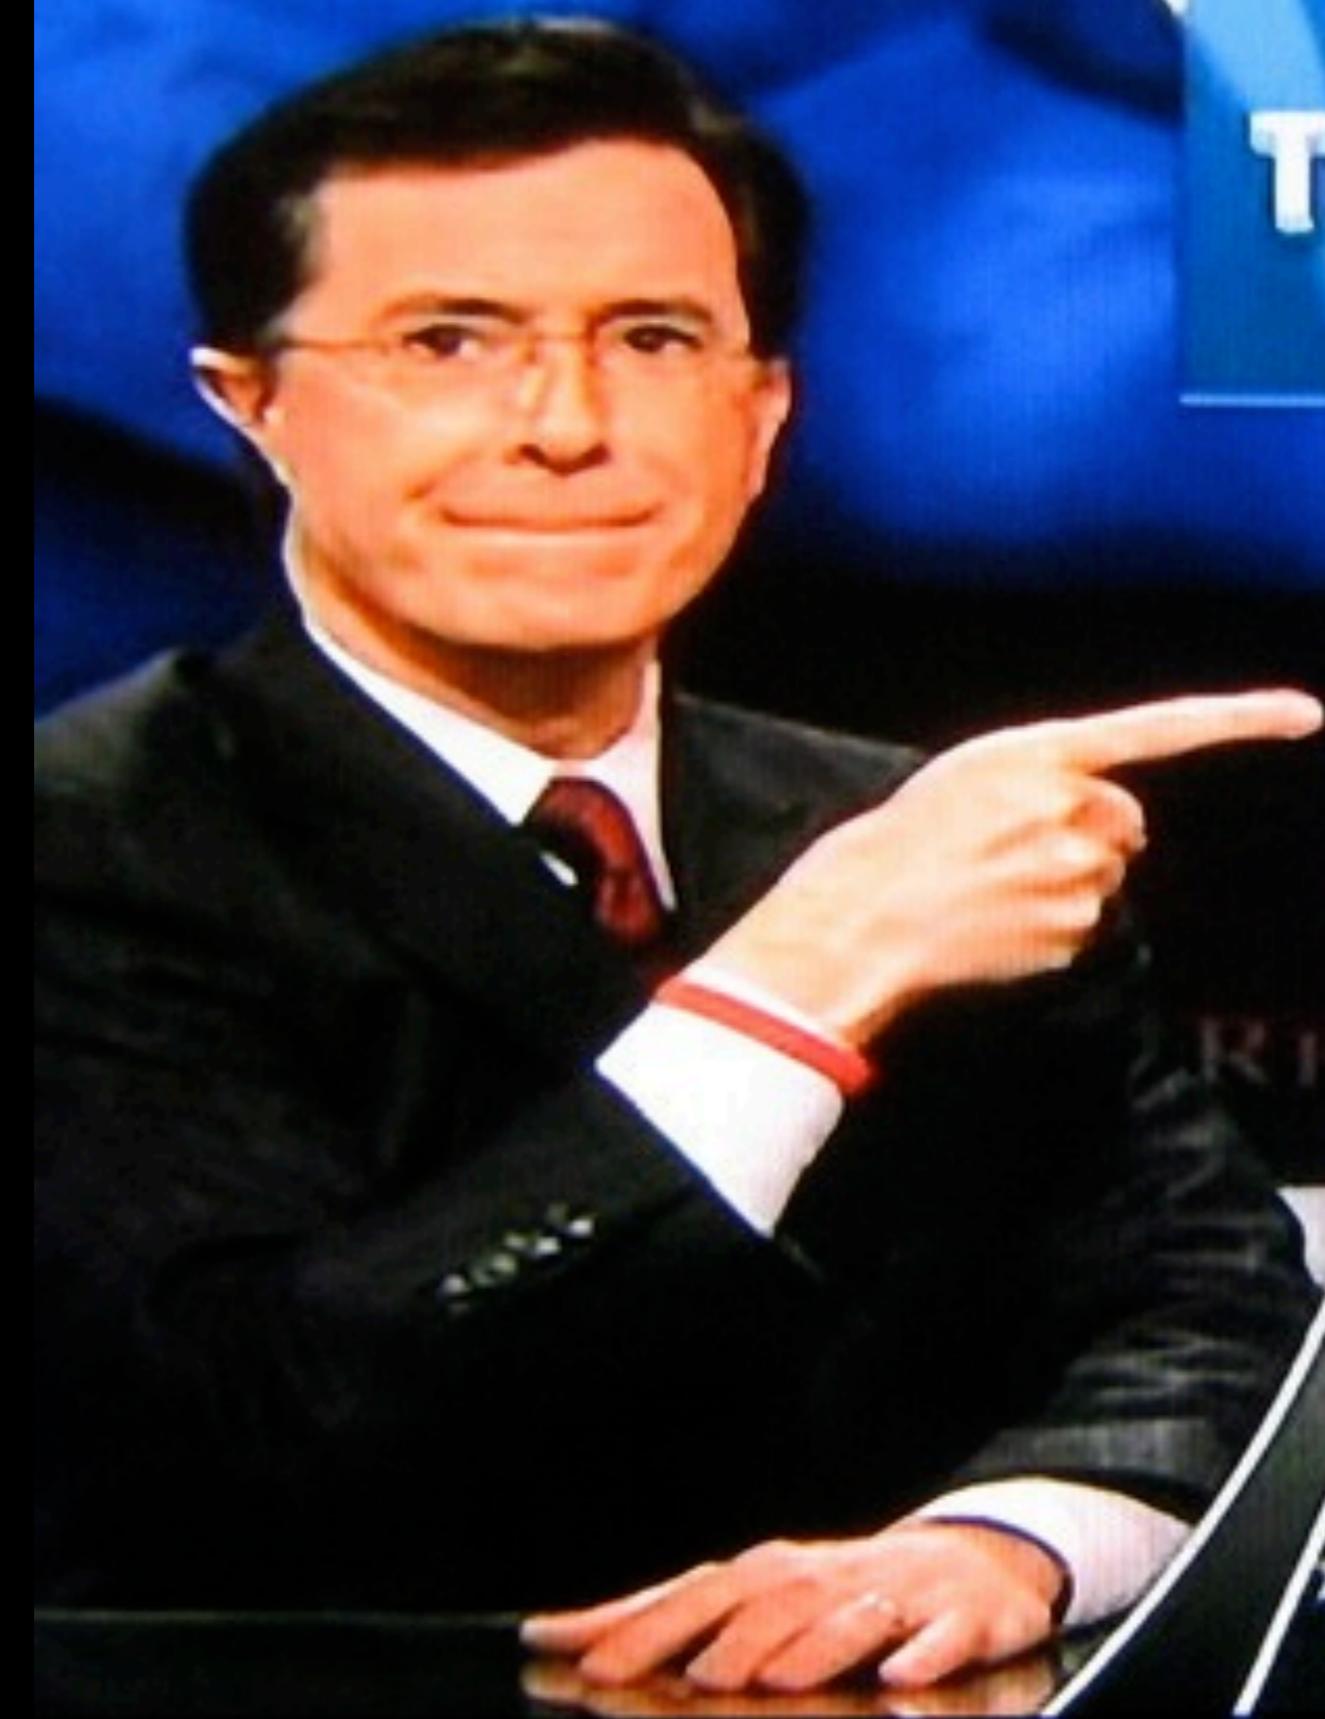

$$p(\text{data}) = p(\text{heads})^7 \times [1 - p(\text{heads})]^3$$

# THE ~~W~~ORD

COM  
EST

A man in a dark suit, white shirt, and red tie, wearing glasses, is pointing his right index finger towards the right. He is positioned on the left side of the frame. The background is a blue graphic with a world map and a row of stars at the bottom. The text 'THE WORD' is prominently displayed in the upper right quadrant. The word 'THE' is in a smaller font, and 'WORD' is in a large, bold, white font with a diagonal slash through the 'O'.

# THE WORD

What's a model?

# What's a model?

For our purposes, a model will be  
**a probability distribution over sentence pairs.**

# Why Probability?

# Why Probability?

- Access to techniques developed and proven over hundreds of years that work on many problems.

# Why Probability?

- Access to techniques developed and proven over hundreds of years that work on many problems.
- In particular, techniques for *learning* and *prediction*.

# Why Probability?

- Access to techniques developed and proven over hundreds of years that work on many problems.
- In particular, techniques for *learning* and *prediction*.
- Allows us to answer questions:

# Why Probability?

- Access to techniques developed and proven over hundreds of years that work on many problems.
- In particular, techniques for *learning* and *prediction*.
- Allows us to answer questions:
  - What is the best explanation of observed data?

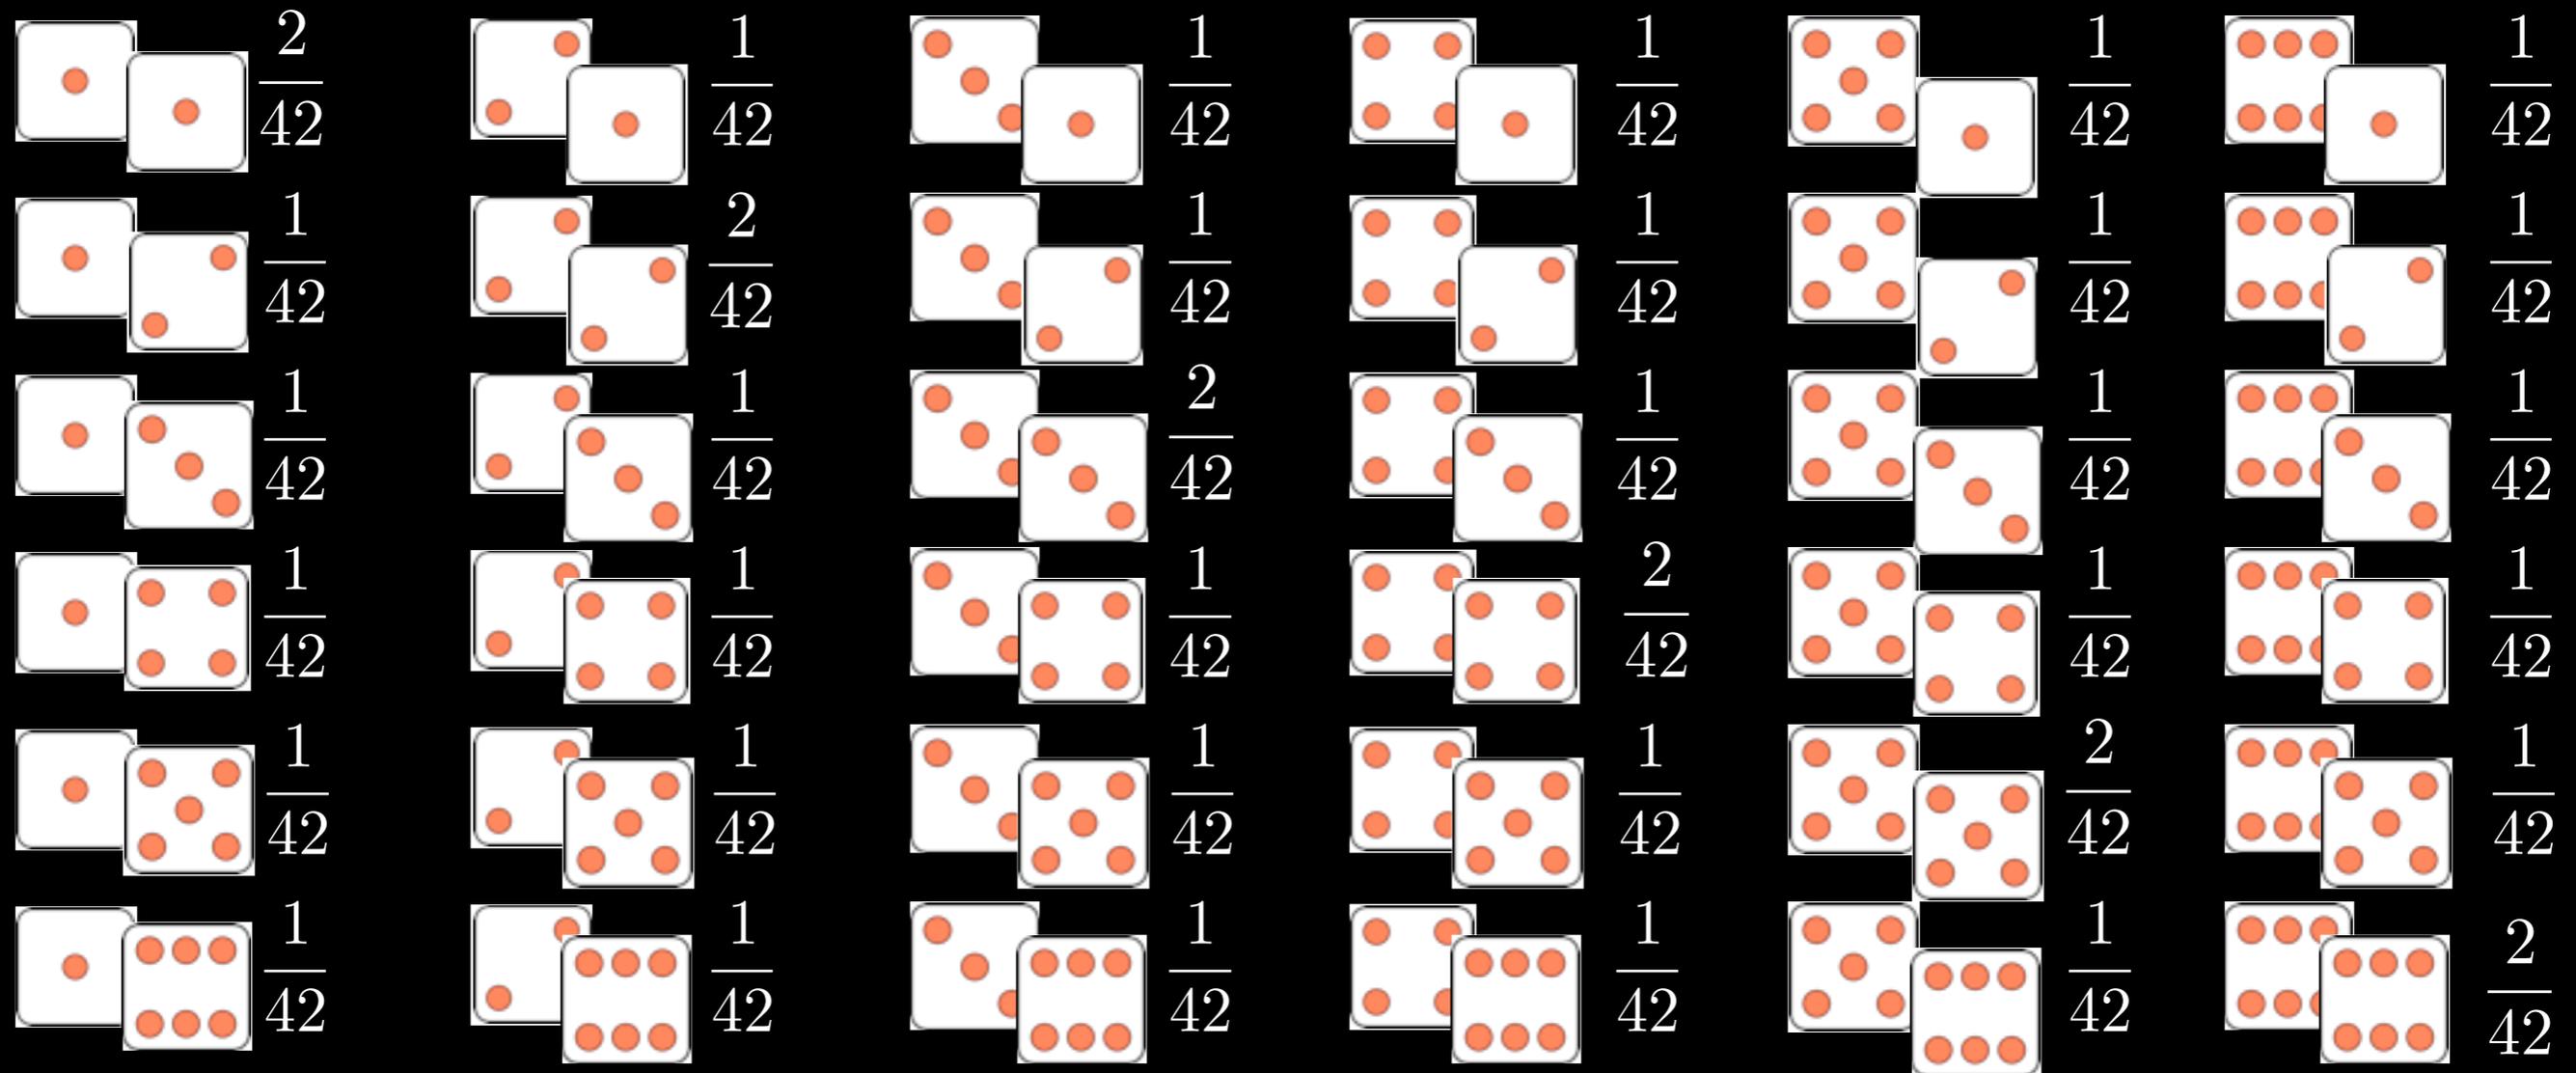

# Why Probability?

- Access to techniques developed and proven over hundreds of years that work on many problems.
- In particular, techniques for *learning* and *prediction*.
- Allows us to answer questions:
  - What is the best explanation of observed data?
  - Given some partially observed data (e.g. an input sentence), what is the most likely complete data (e.g. a sentence pair)?

# Why Probability?

- Access to techniques developed and proven over hundreds of years that work on many problems.
- In particular, techniques for *learning* and *prediction*.
- Allows us to answer questions:
  - What is the best explanation of observed data?
  - Given some partially observed data (e.g. an input sentence), what is the most likely complete data (e.g. a sentence pair)?
- Common sense in mathematical form!

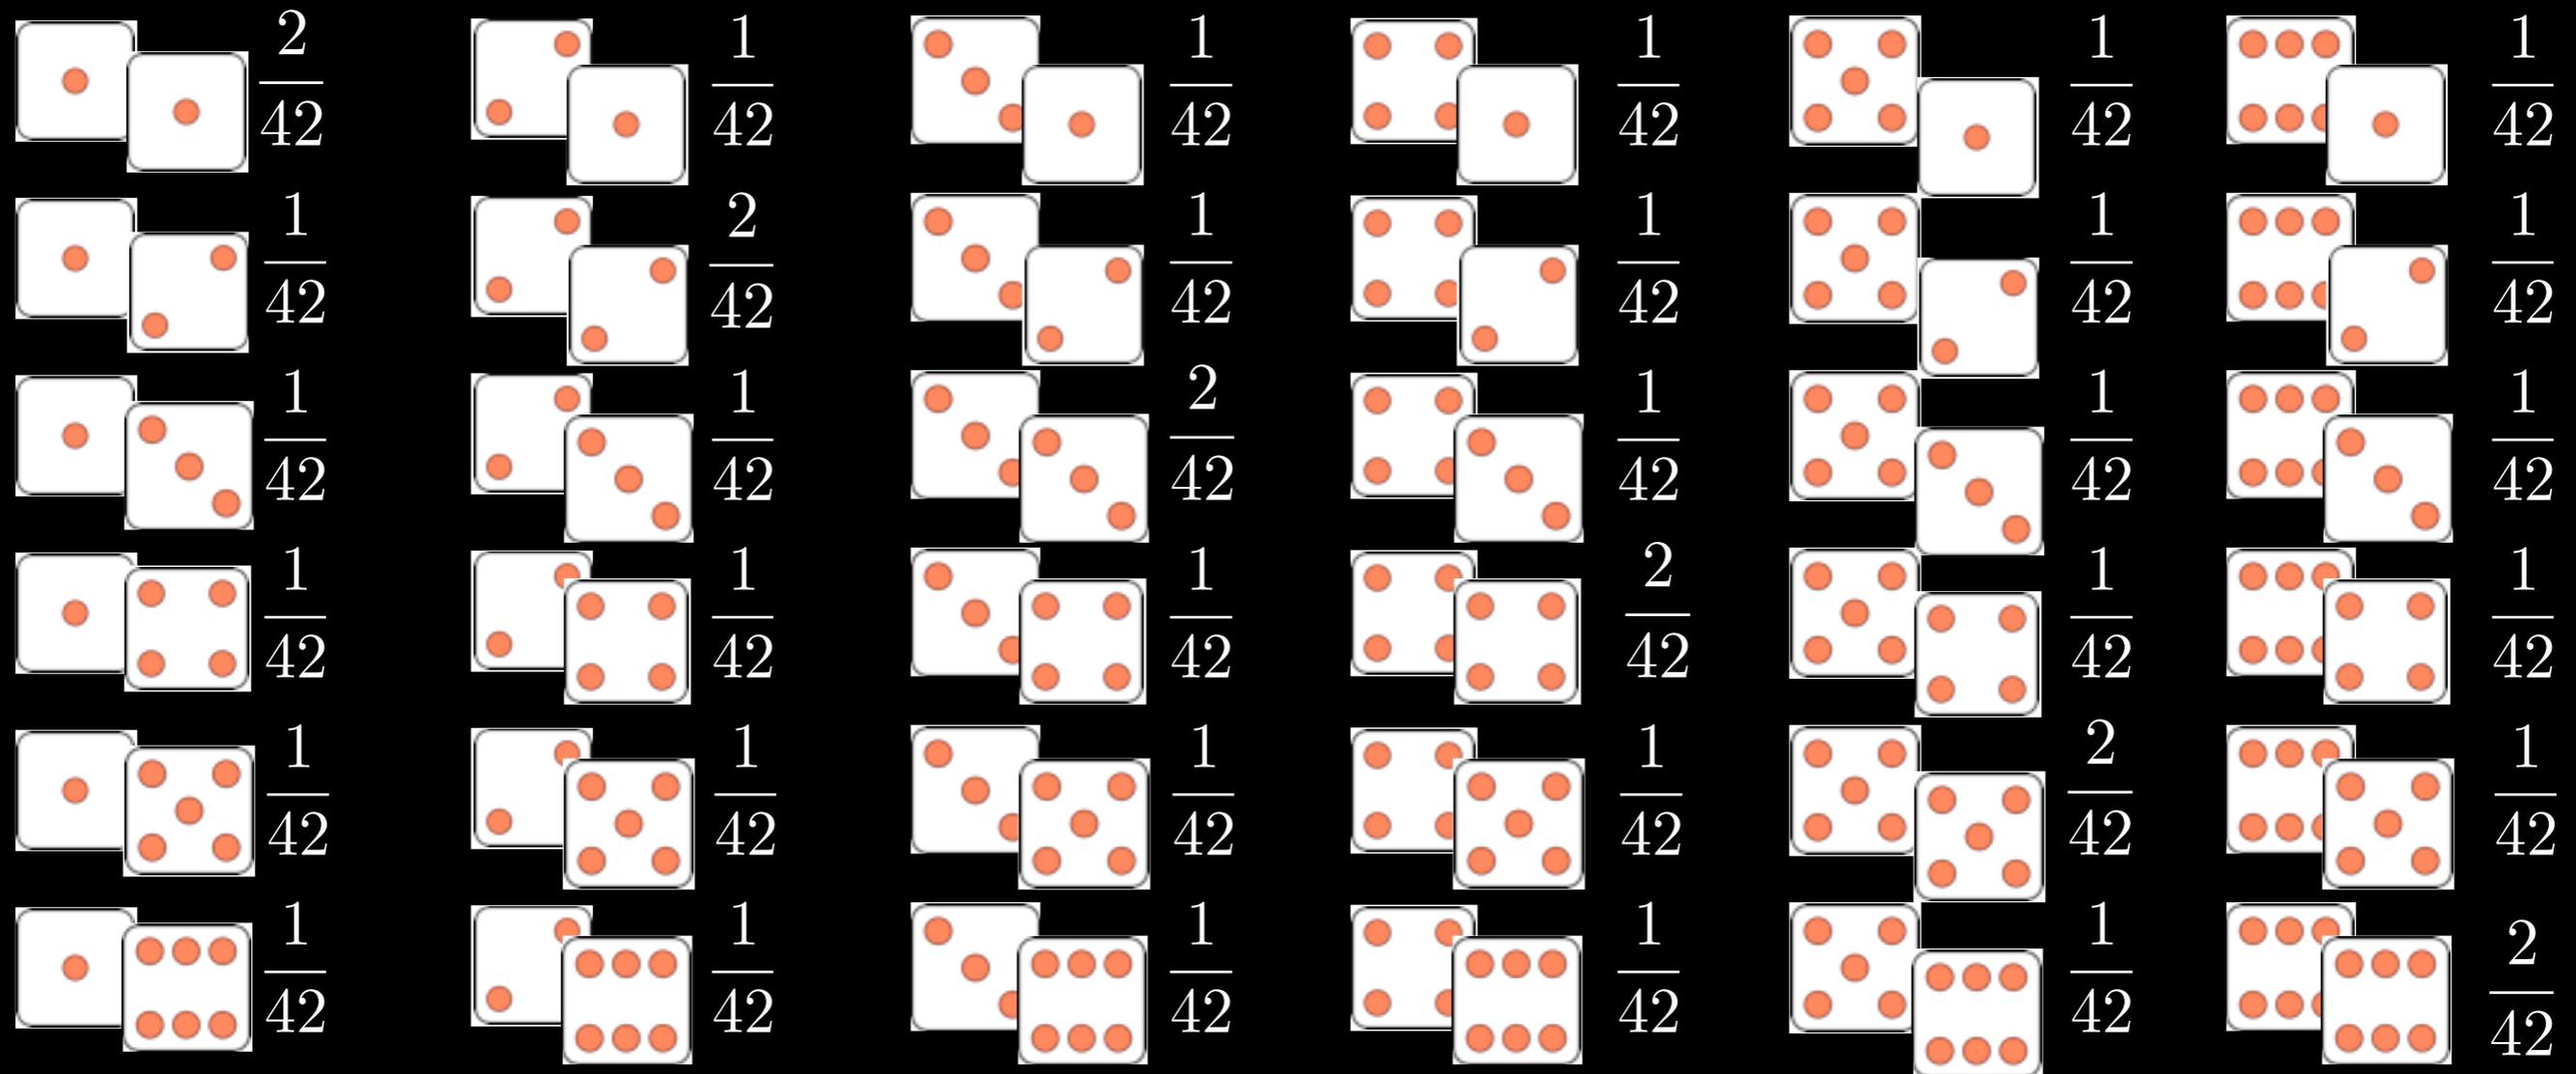

# Probabilistic Primer

The probabilities of all possible events must sum to 1.

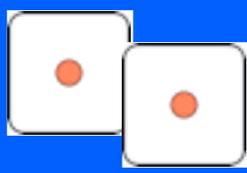

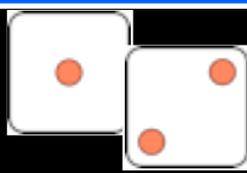

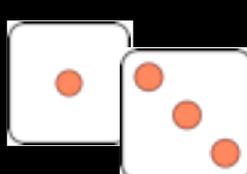

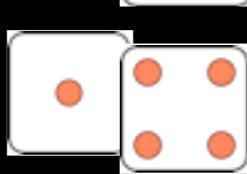

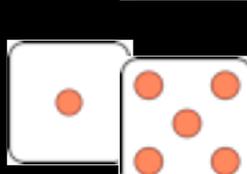

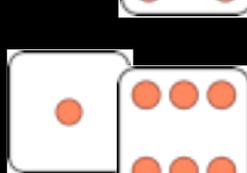

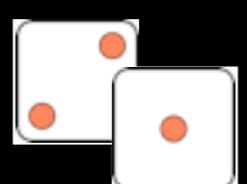

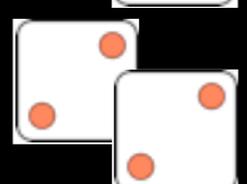

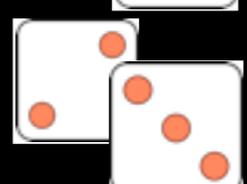

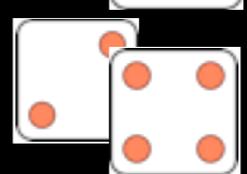

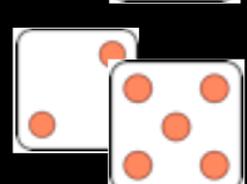

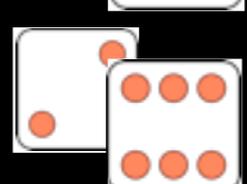

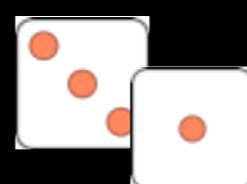

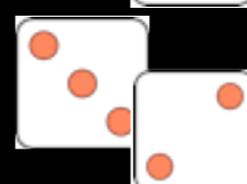

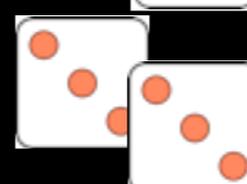

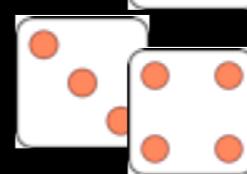

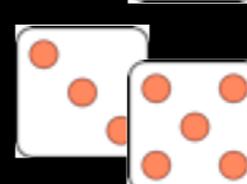

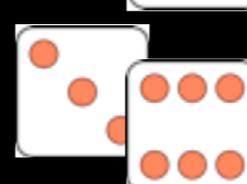

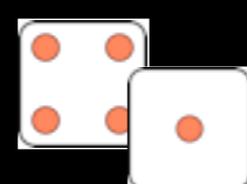

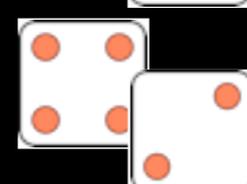

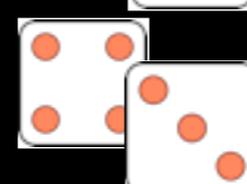

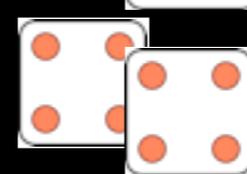

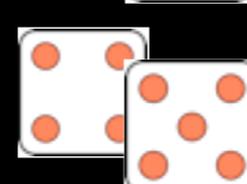

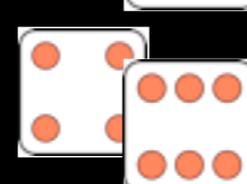

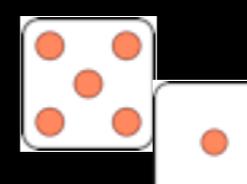

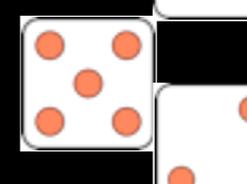

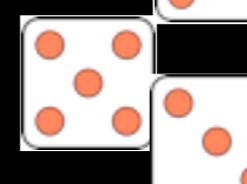

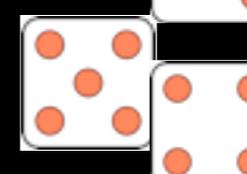

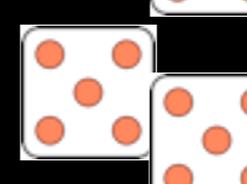

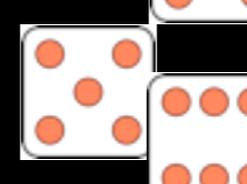

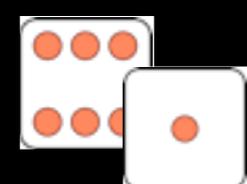

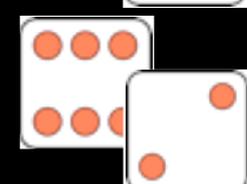

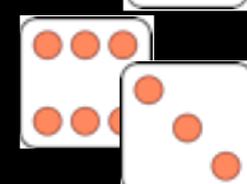

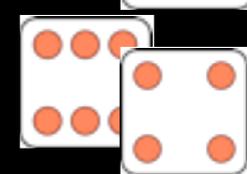

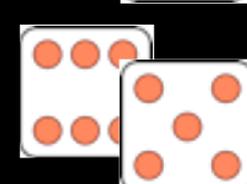

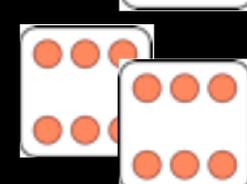

$$\sum_{e \in E} p(e) = 1$$

# Probabilistic Primer

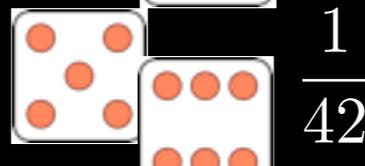

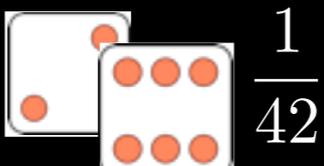

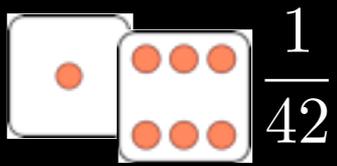

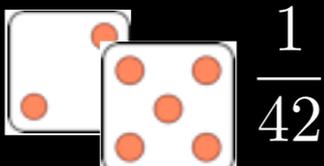

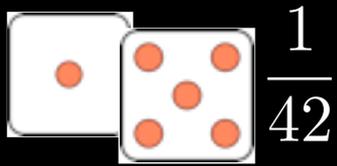

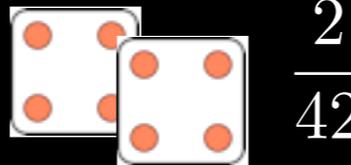

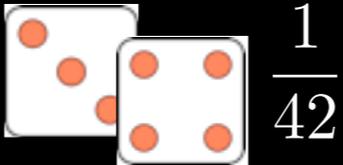

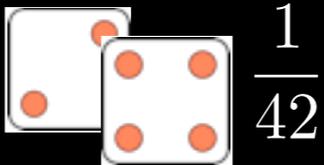

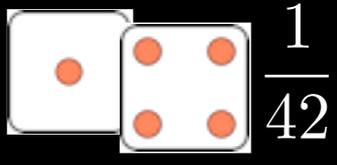

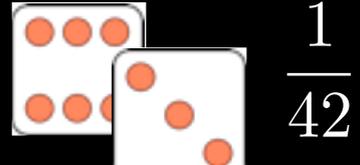

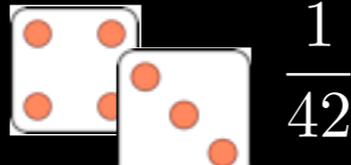

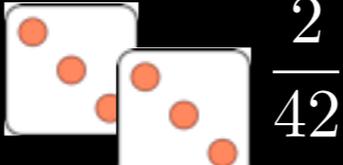

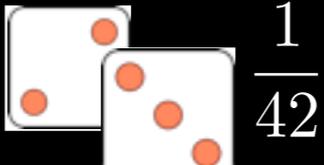

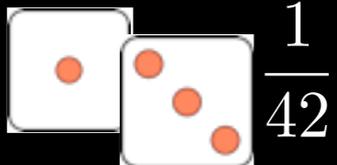

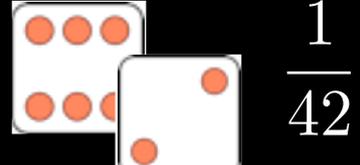

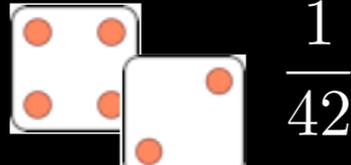

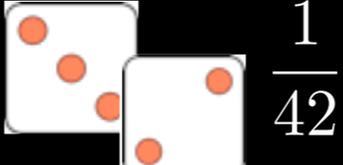

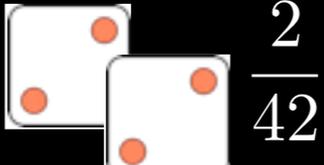

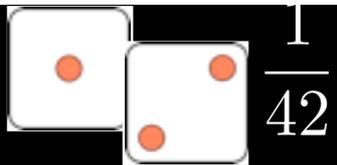

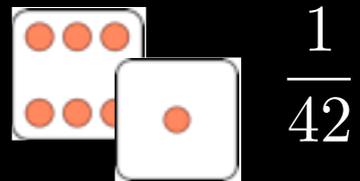

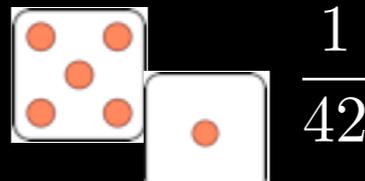

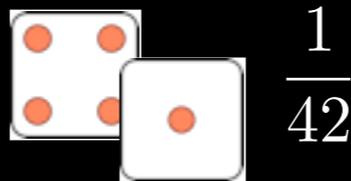

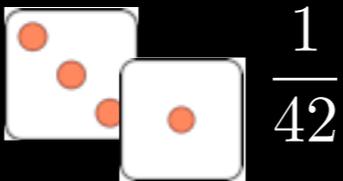

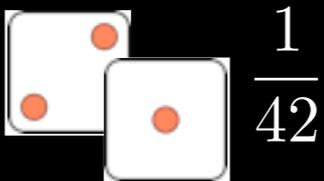

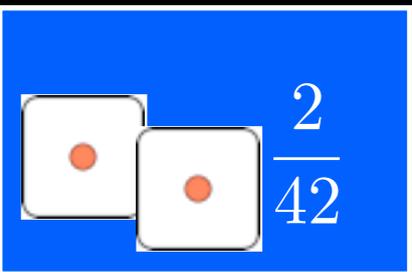

When an event consists of observations about more than one variable, it is a *joint probability*.

# Probabilistic Primer

 $\frac{2}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{2}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{2}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{2}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{2}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{1}{42}$  $\frac{2}{42}$ 

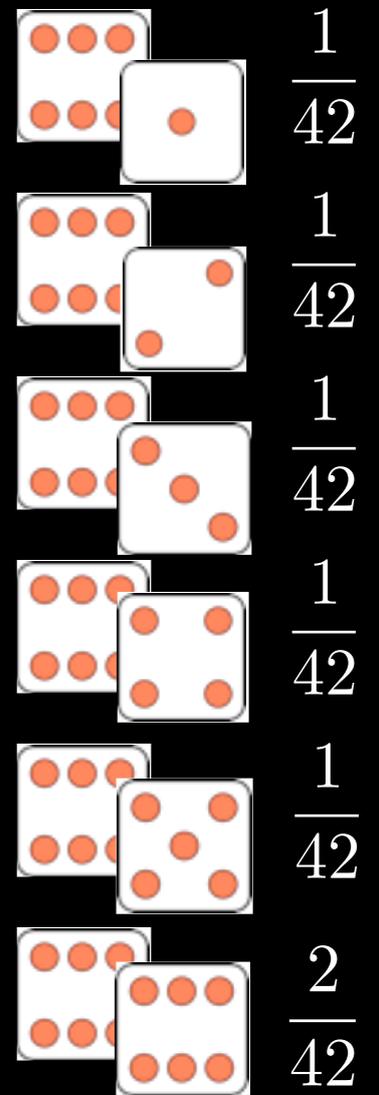

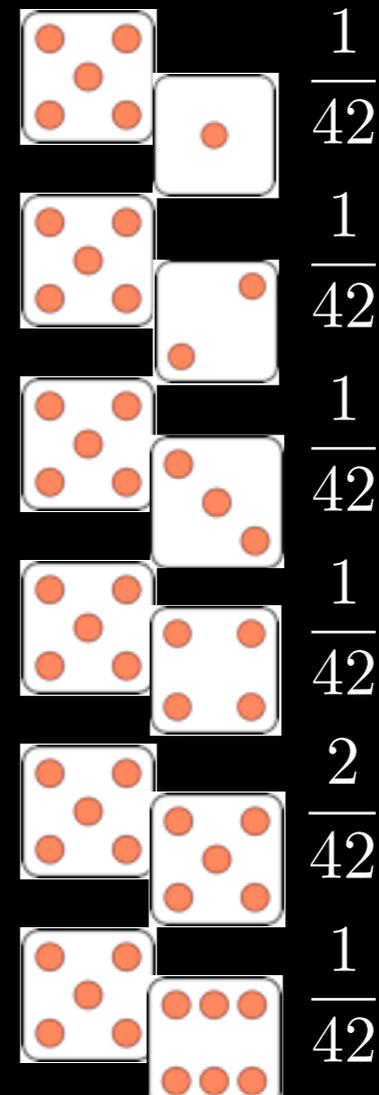

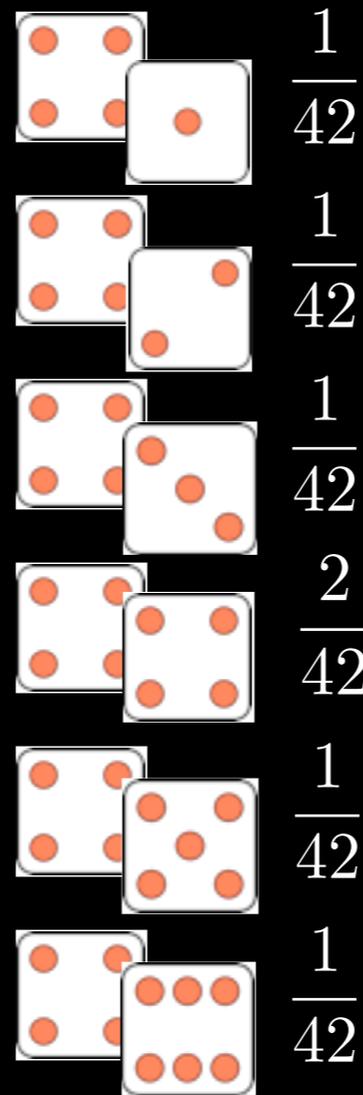

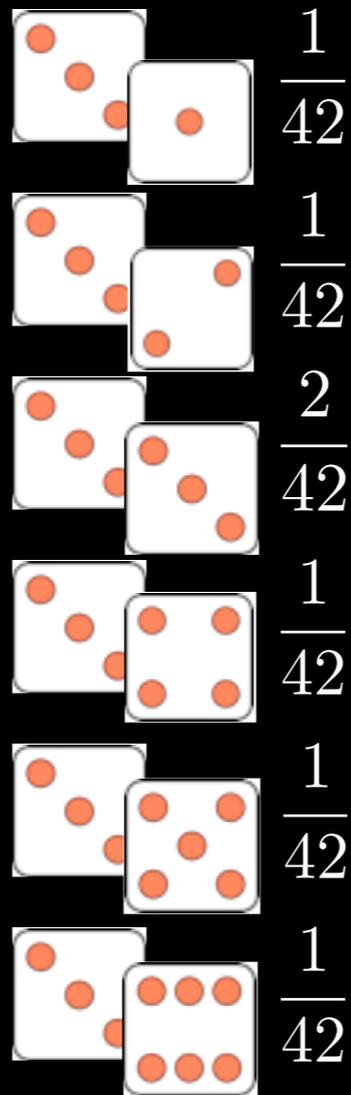

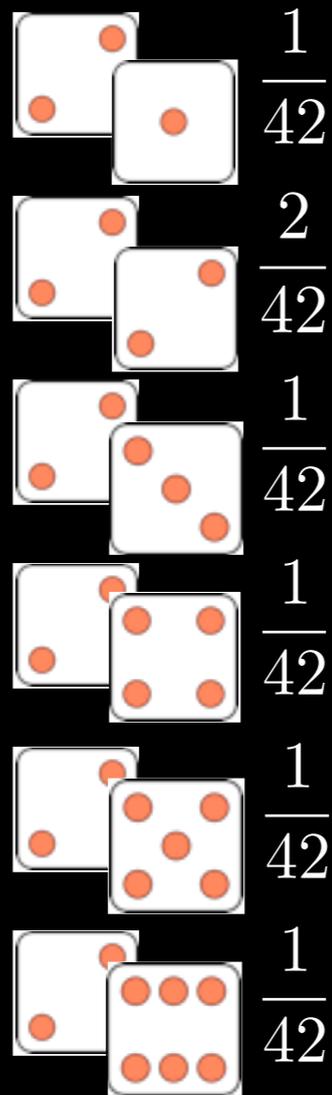

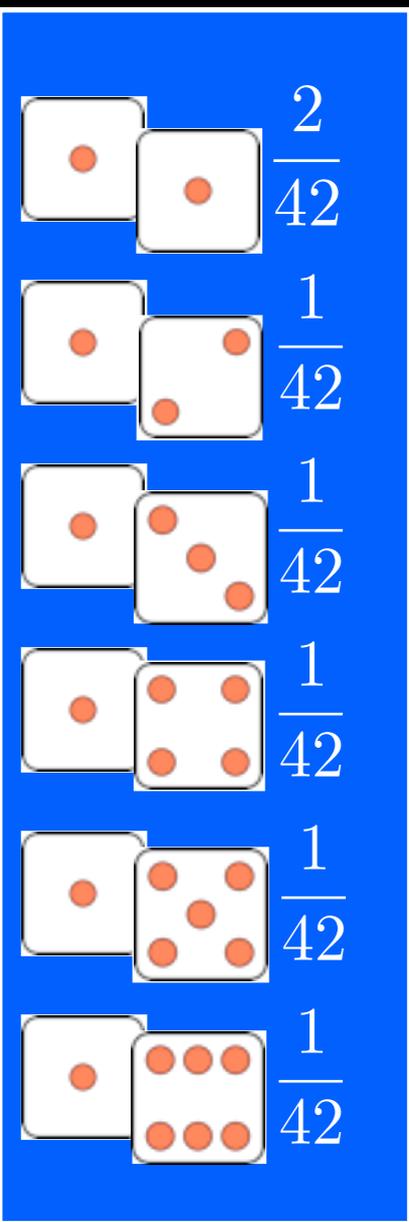

$$p(A = 1, B = 1) = \frac{2}{42}$$

# Probabilistic Primer

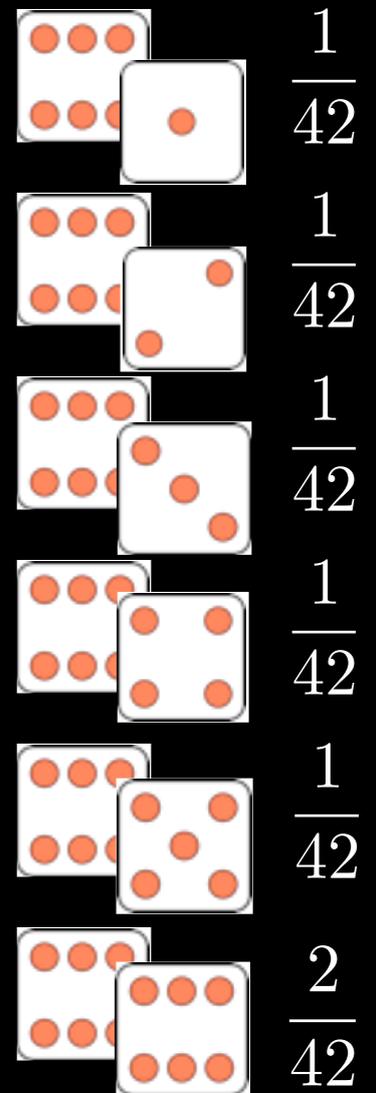

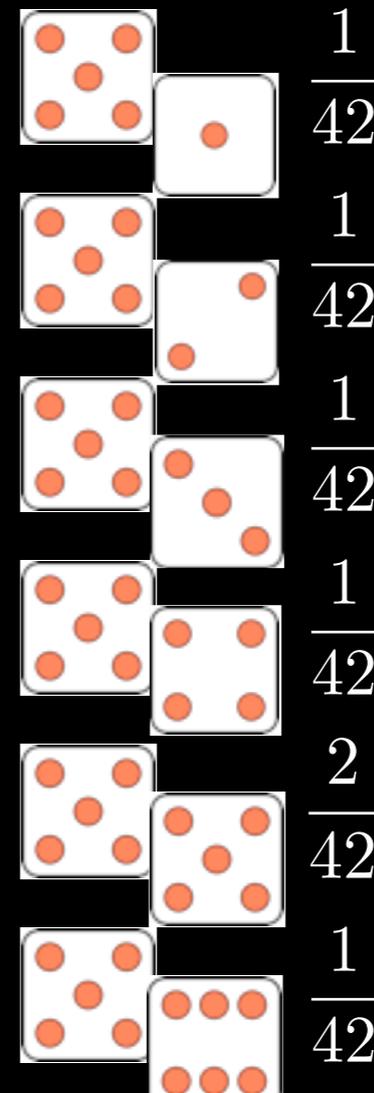

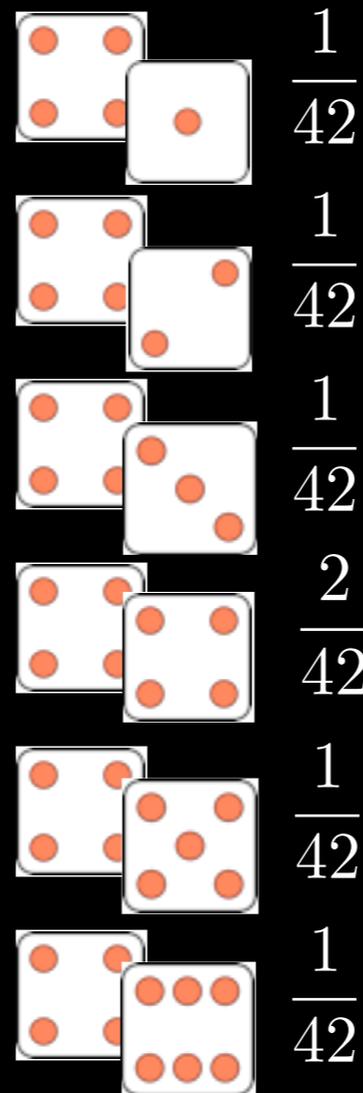

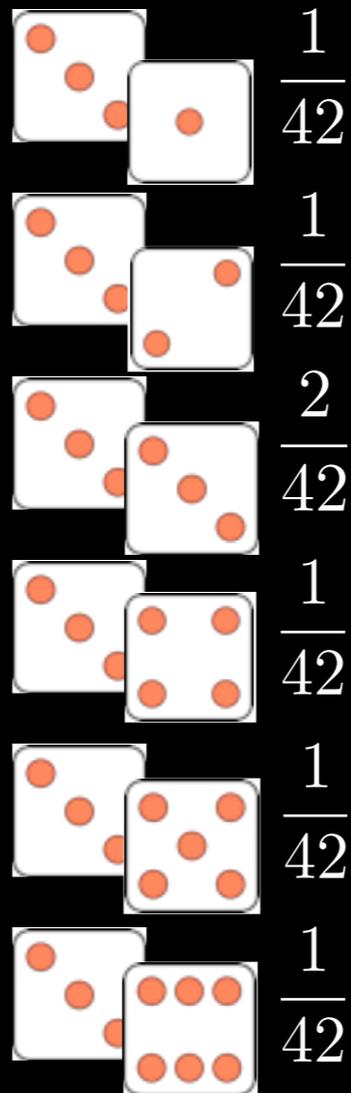

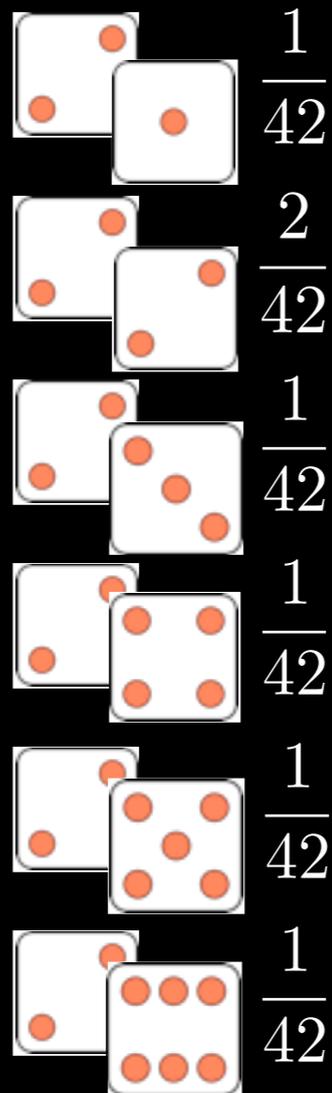

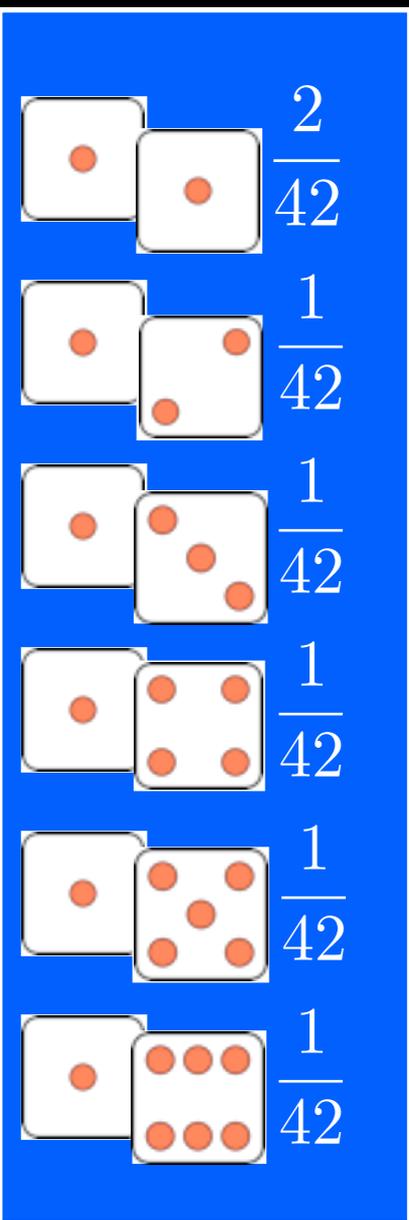

$$p(1, 1) = \frac{2}{42}$$

# Probabilistic Primer

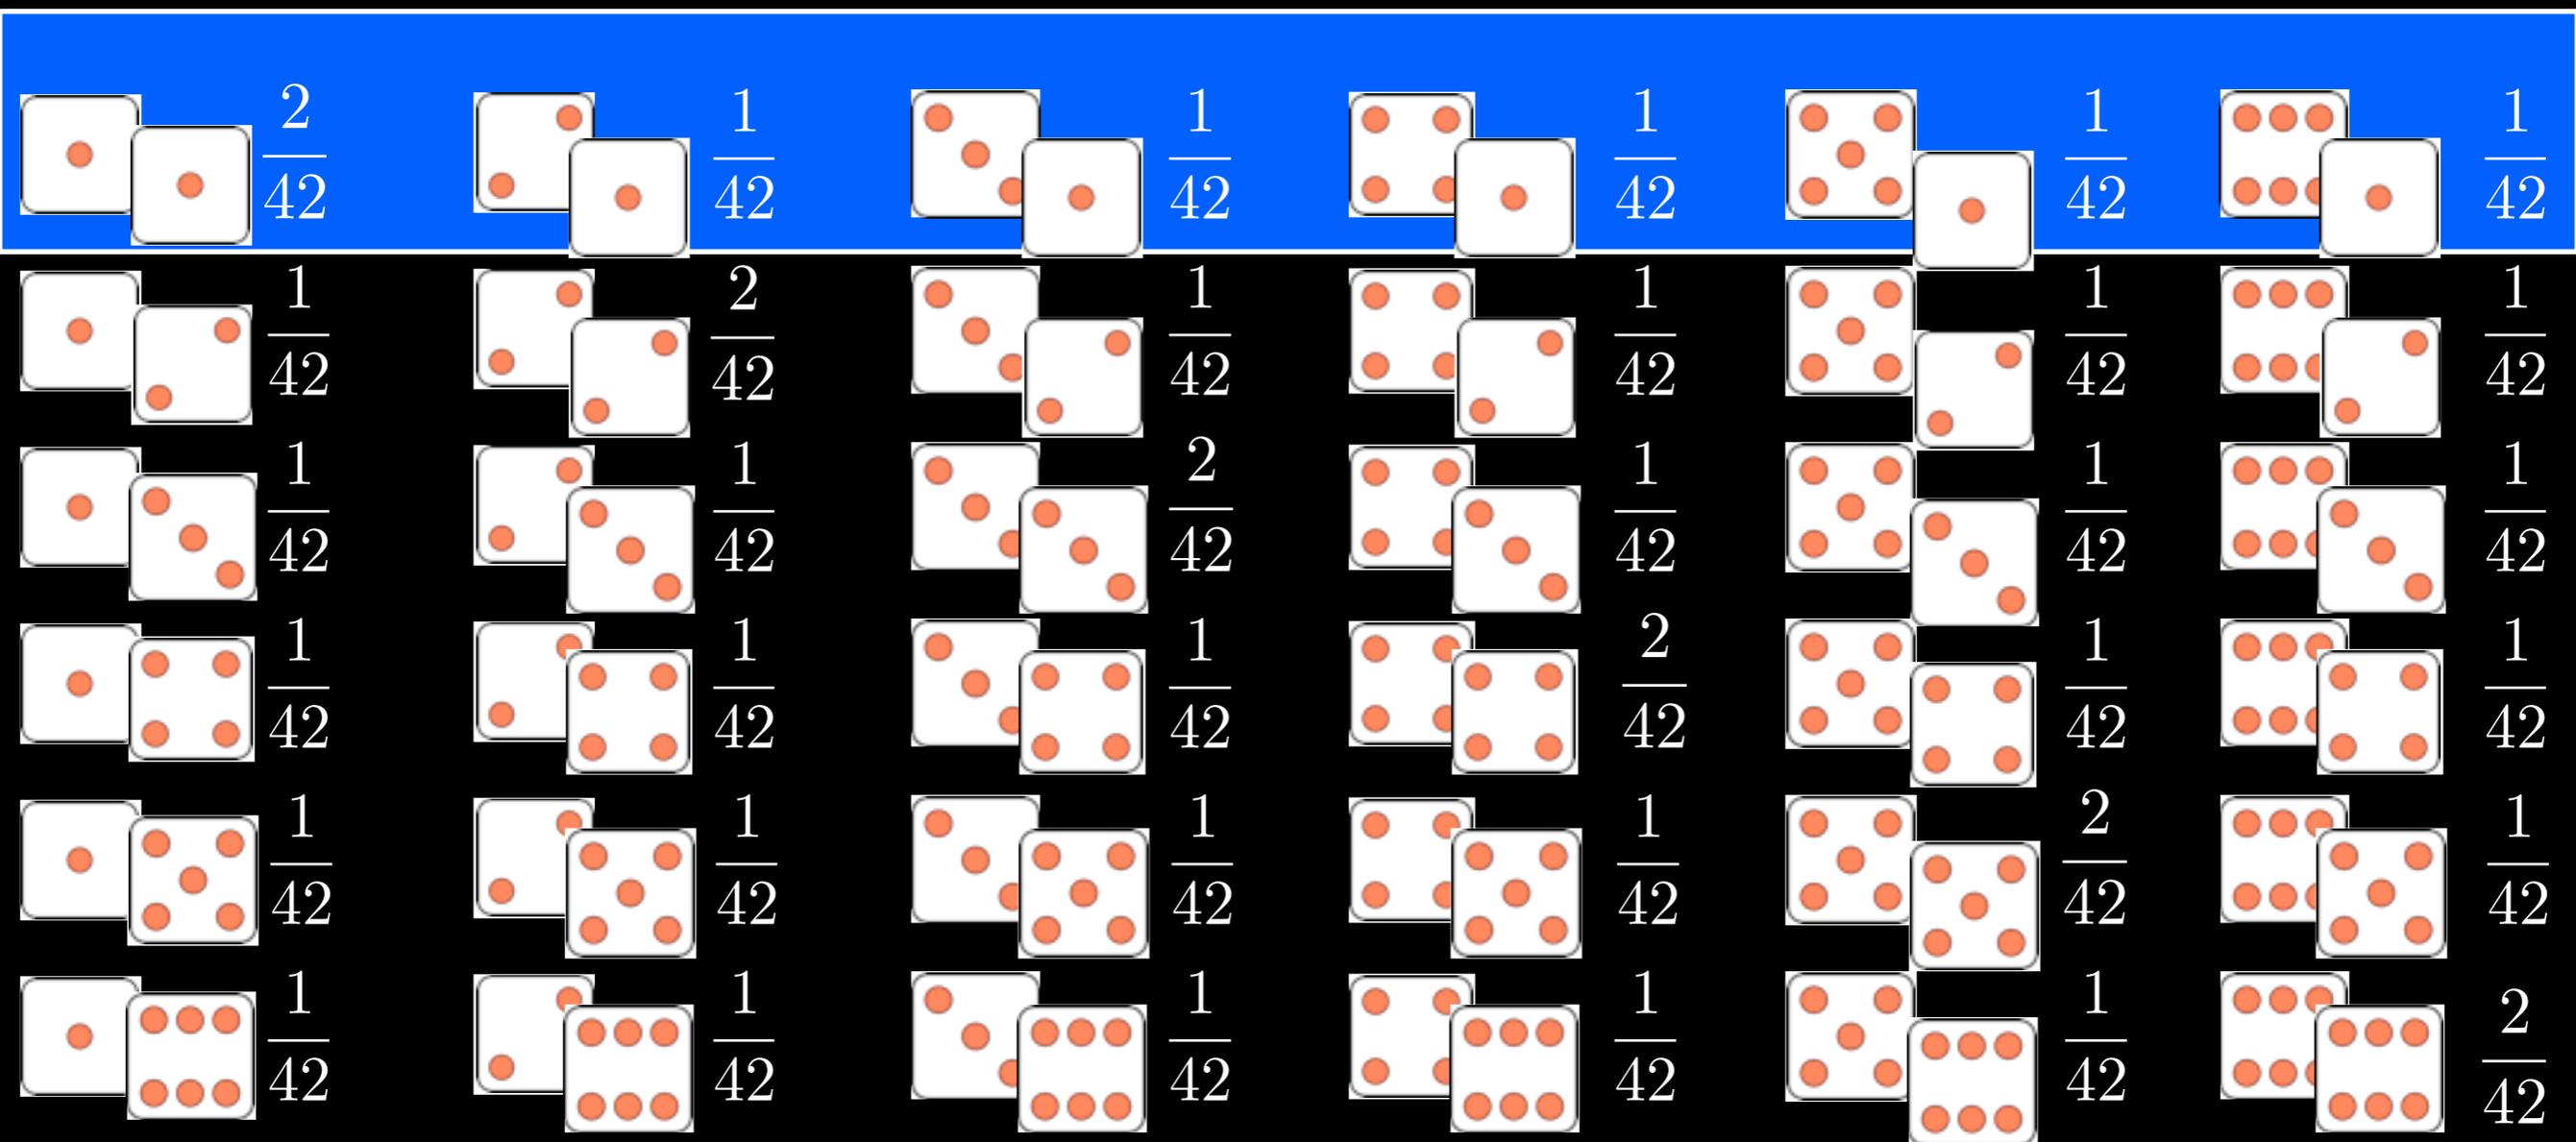

A probability distribution over a subset of variables is a *marginal probability*.

# Probabilistic Primer

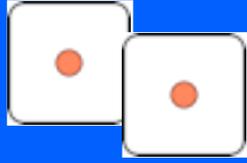

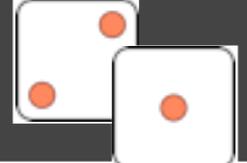

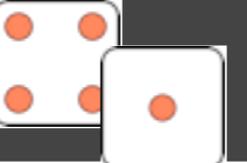

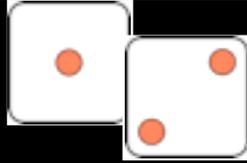

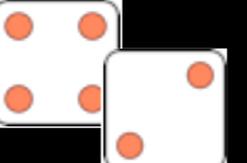

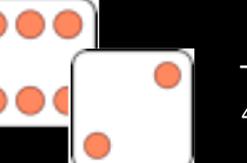

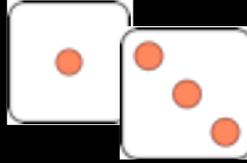

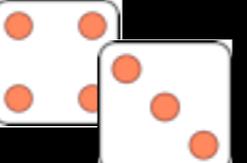

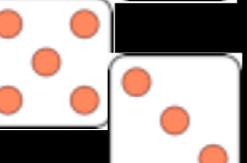

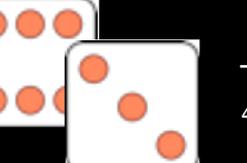

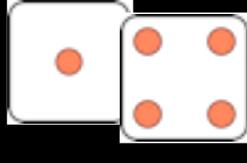

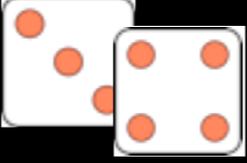

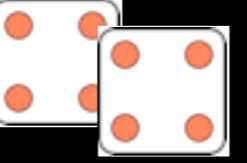

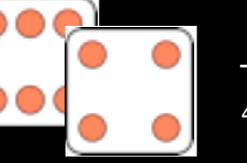

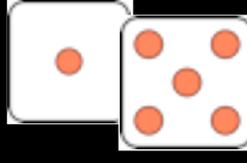

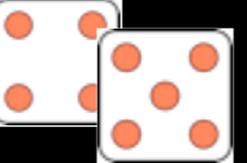

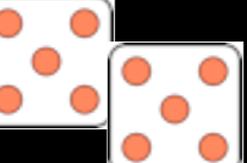

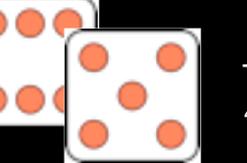

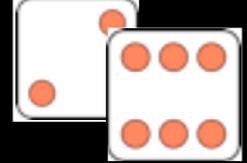

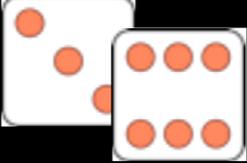

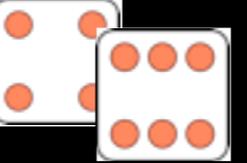

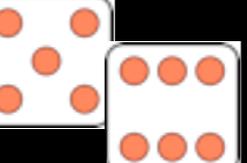

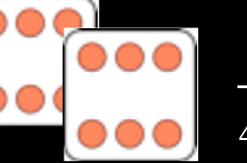

$$p(B = 1) = p(\cdot, 1) = \sum_{a \in A} p(A = a, B = 1) = \frac{1}{6}$$

# Probabilistic Primer

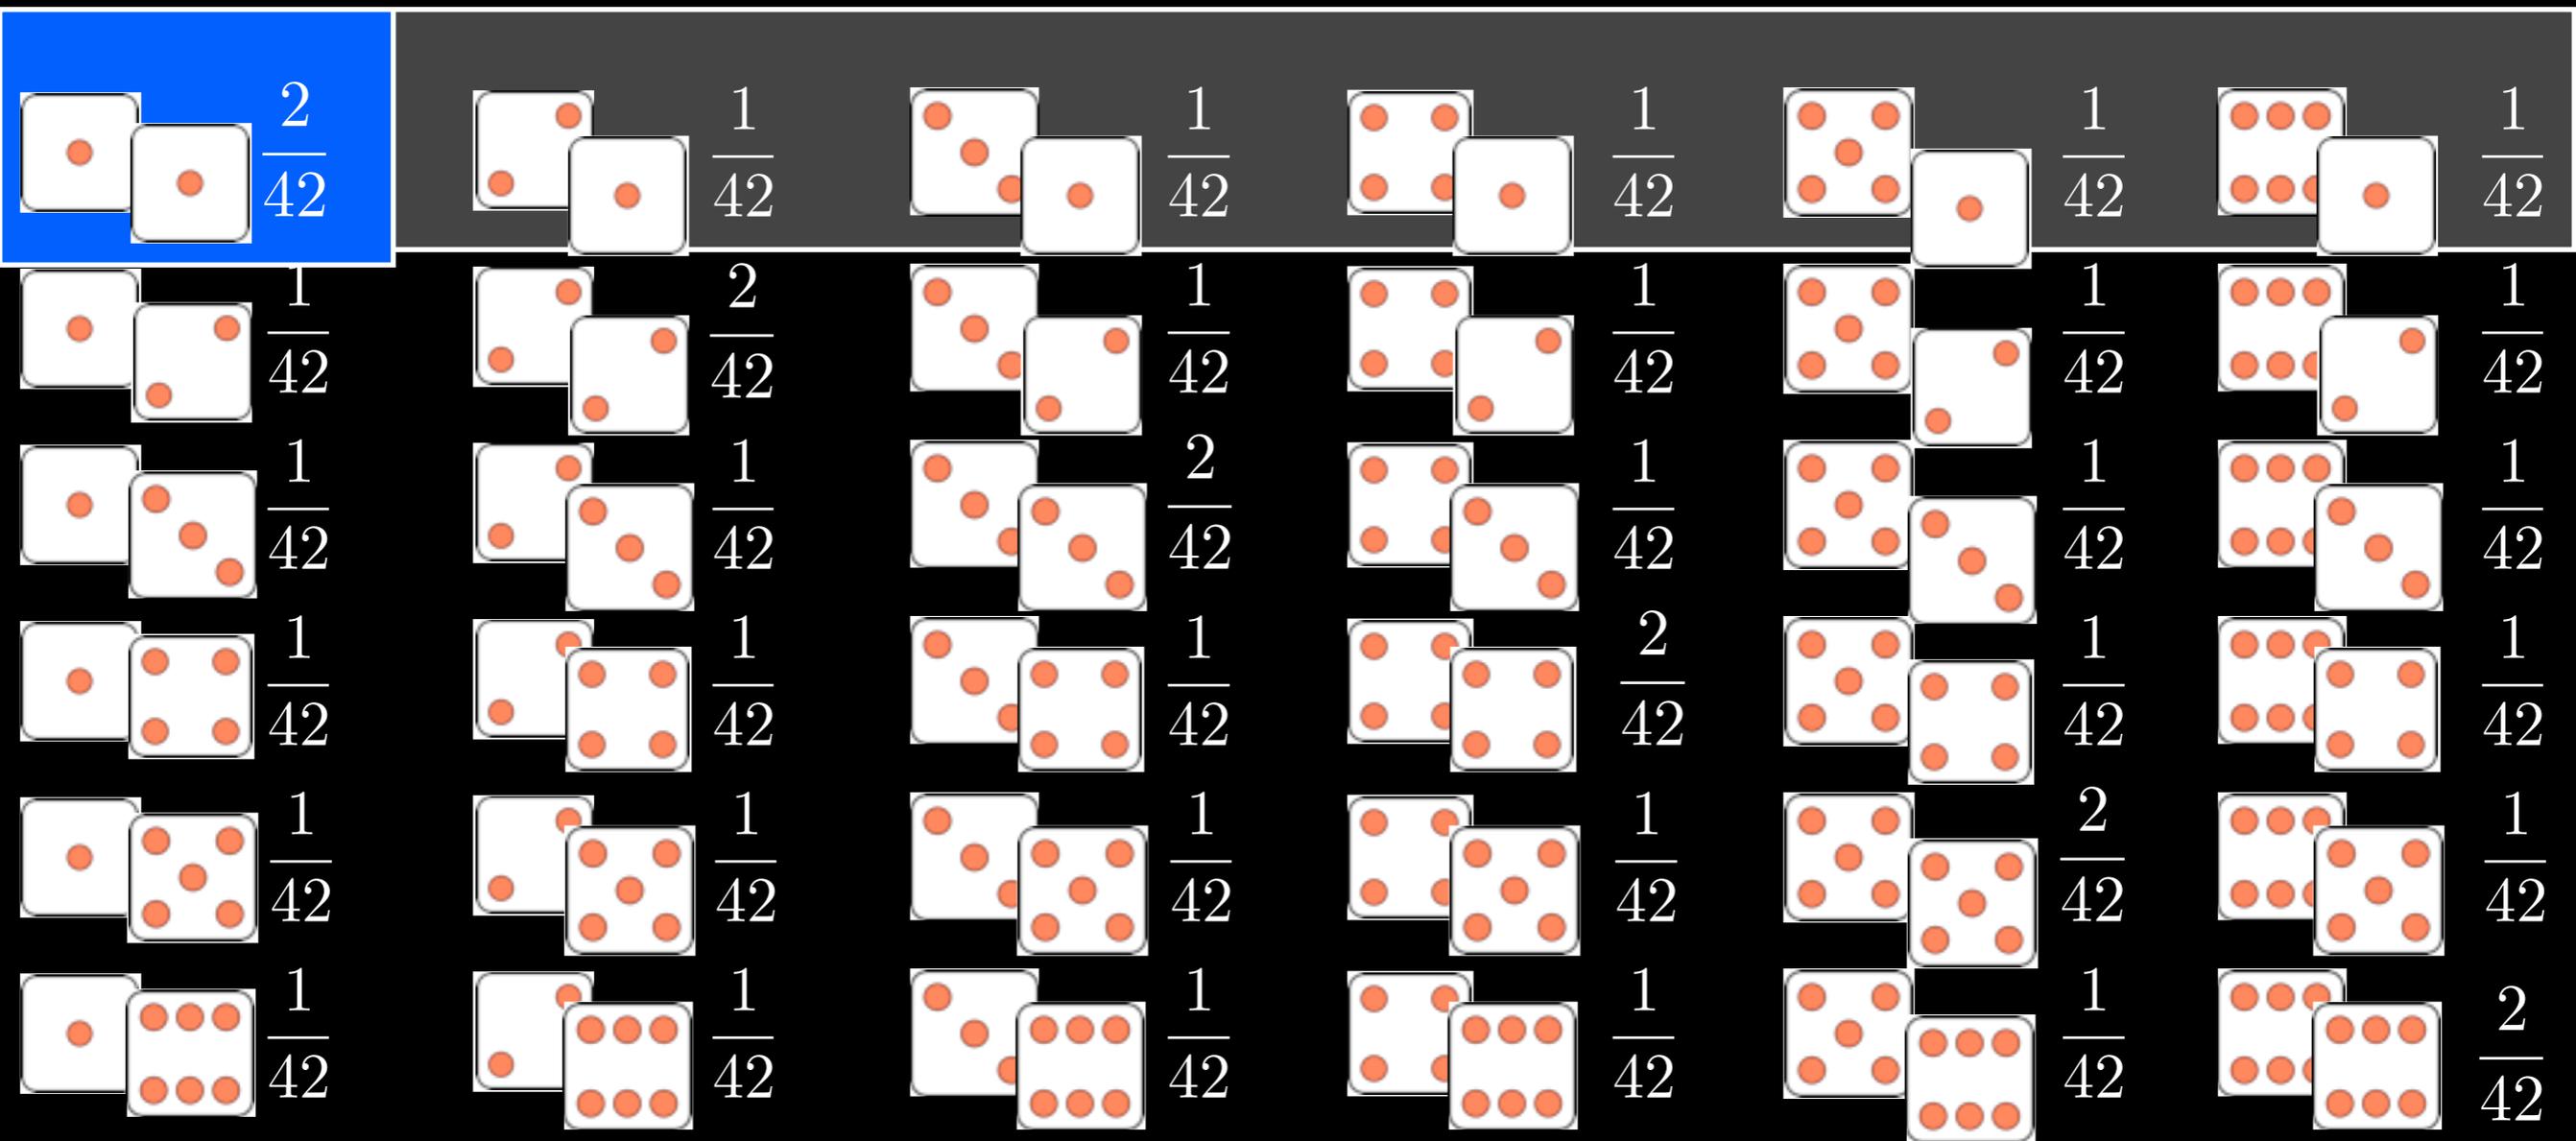

$$p(A = 1) = p(1, \cdot) = \sum_{b \in B} p(A = 1, B = b) = \frac{1}{6}$$

# Probabilistic Primer

 $\frac{2}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$
 $\frac{1}{42}$	 $\frac{2}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$
 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{2}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$
 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{2}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$
 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{2}{42}$	 $\frac{1}{42}$
 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{1}{42}$	 $\frac{2}{42}$

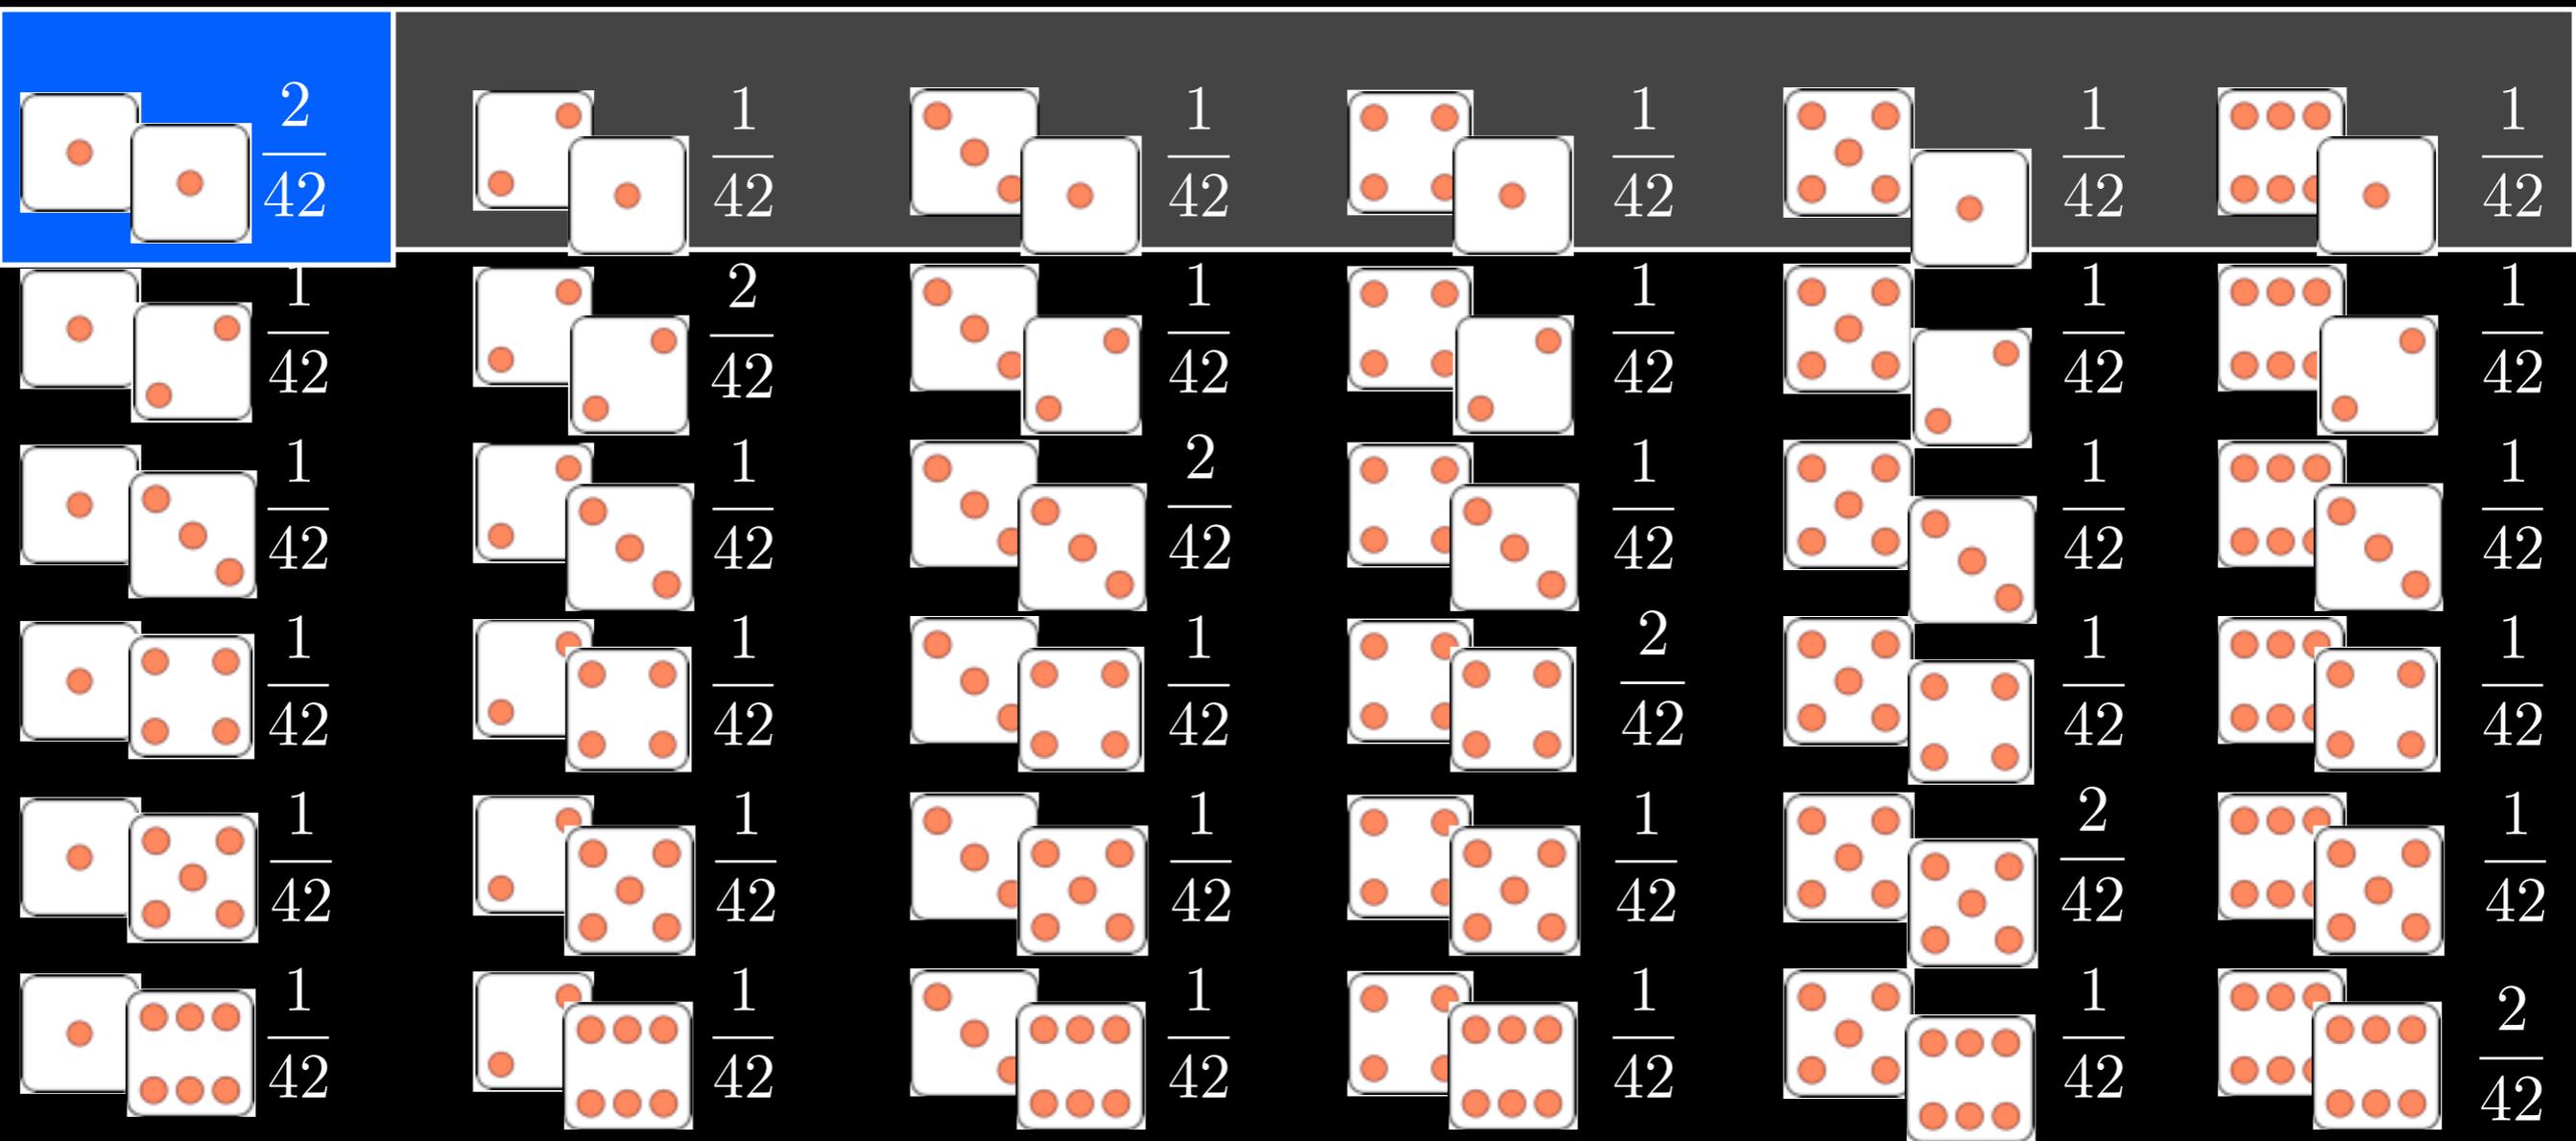

The probability of a variable under the condition that the other variables are fixed is the *conditional probability*.

# Probabilistic Primer

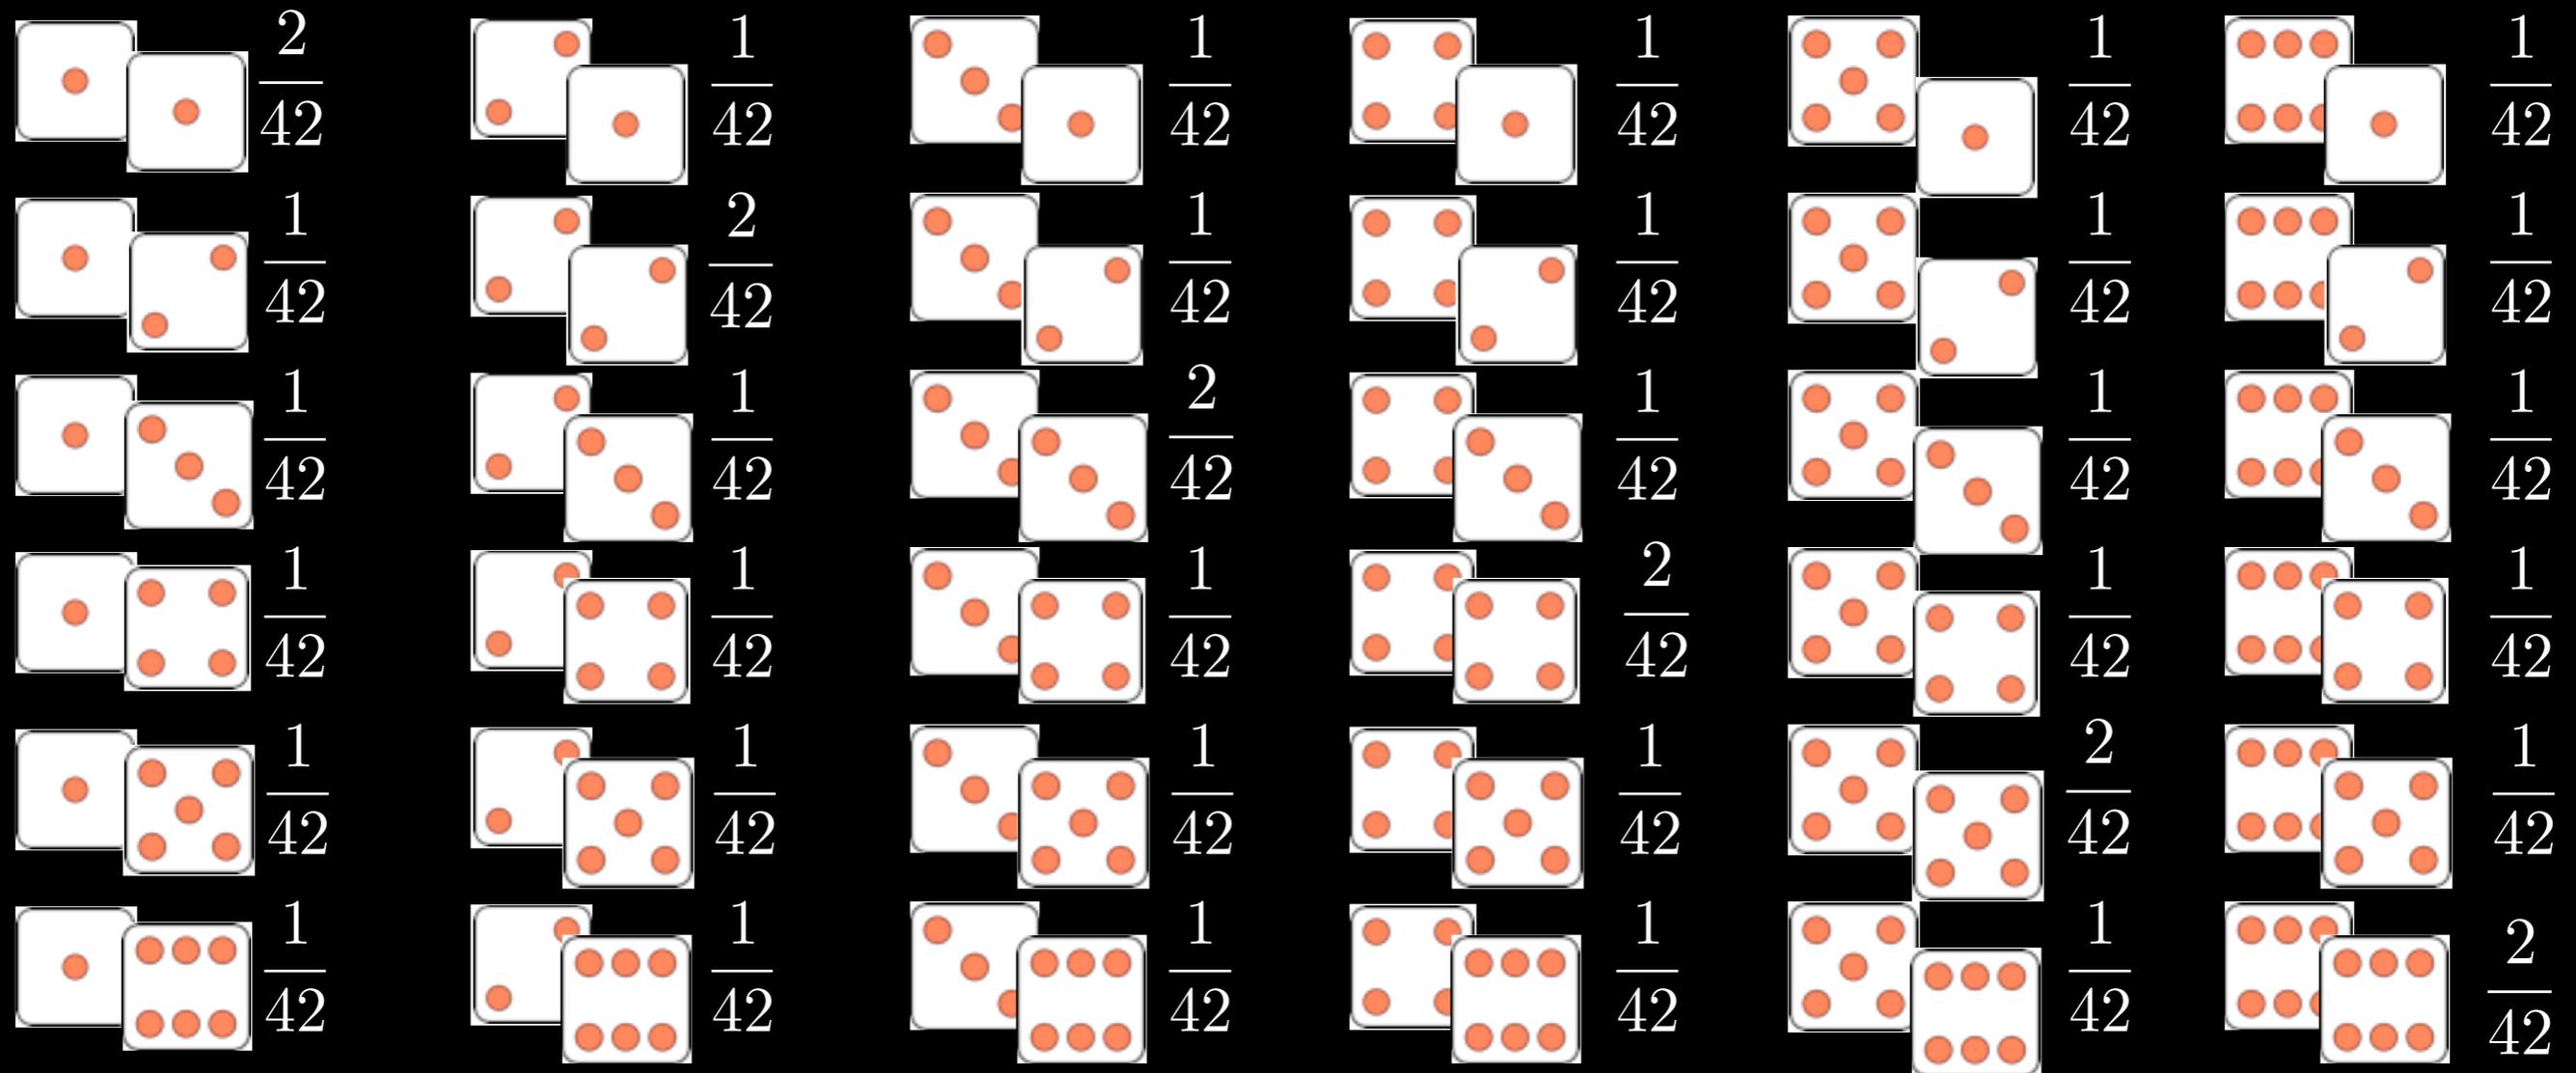

$$p(B = 1 | A = 1) = \frac{p(A = 1, B = 1)}{\sum_{b \in B} p(A = 1, B = b)} = \frac{2}{7}$$

# Probabilistic Primer

$$p(B = 1 | A = 1) = \frac{p(A = 1, B = 1)}{\sum_{b \in B} p(A = 1, B = b)} = \frac{2}{7} \quad \frac{\text{joint}}{\text{marginal}}$$

# Probabilistic Primer

We can still represent the joint distribution as a product of other distributions.

# Probabilistic Primer

$\frac{2}{42}$

$\frac{1}{42}$

$\frac{1}{42}$

$\frac{1}{42}$

$\frac{1}{42}$

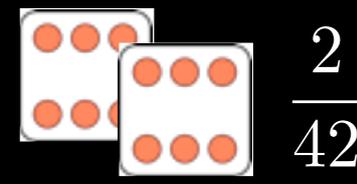

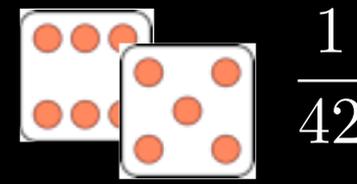

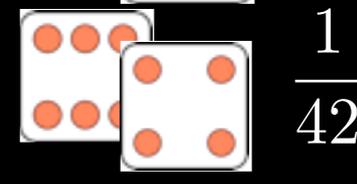

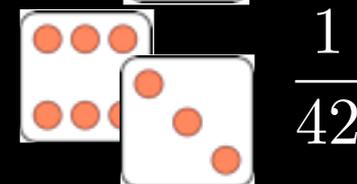

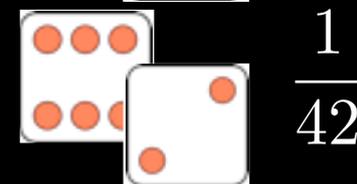

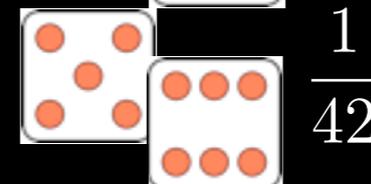

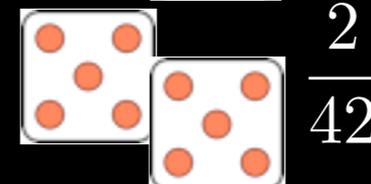

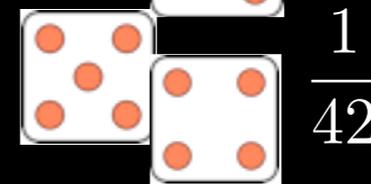

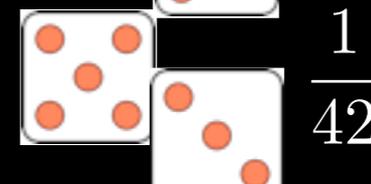

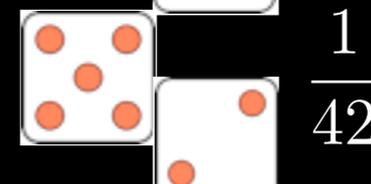

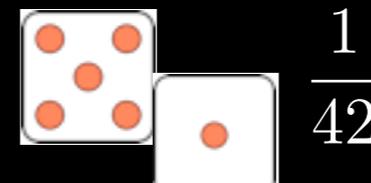

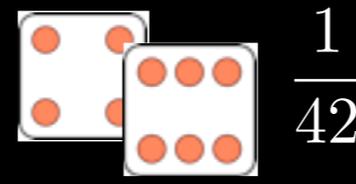

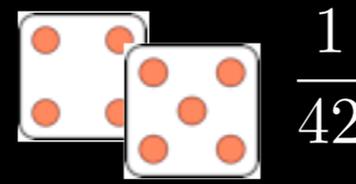

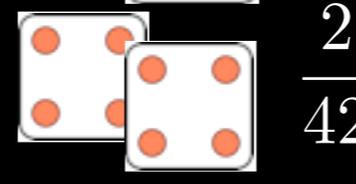

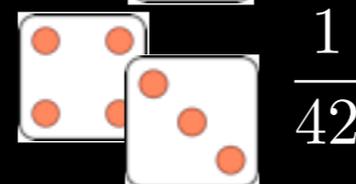

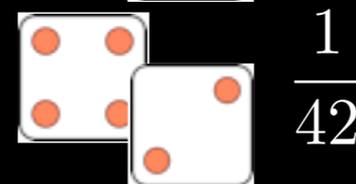

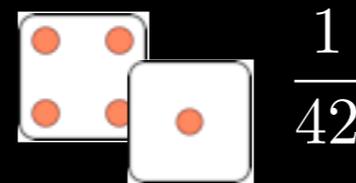

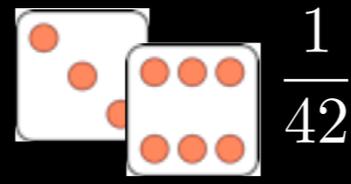

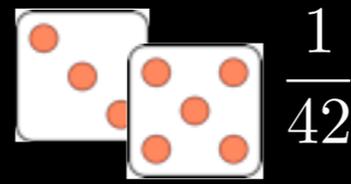

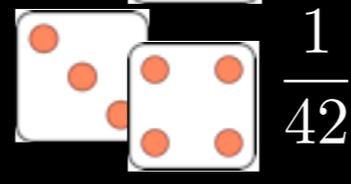

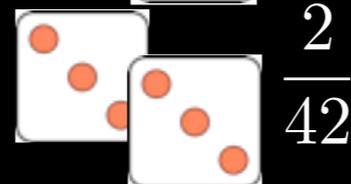

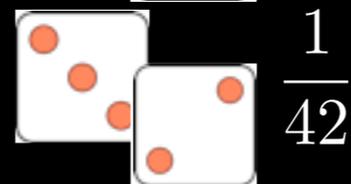

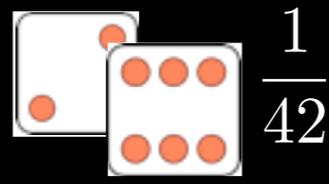

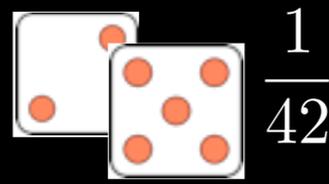

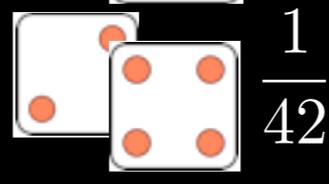

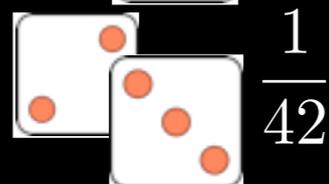

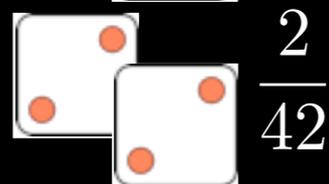

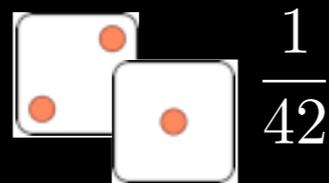

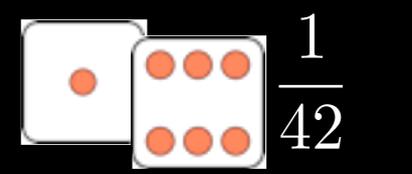

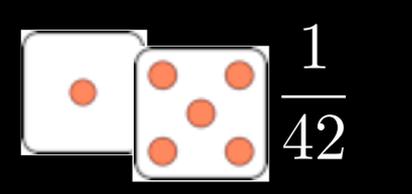

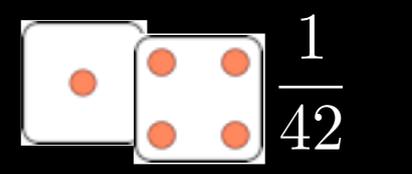

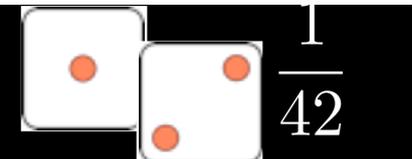

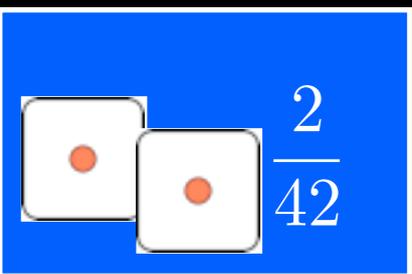

$\frac{1}{42}$

$\frac{1}{42}$

$\frac{2}{42}$

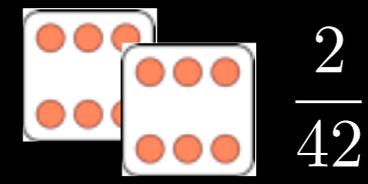

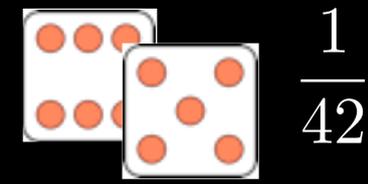

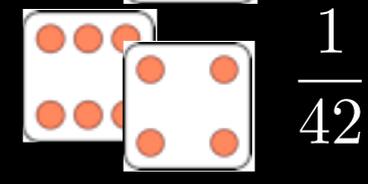

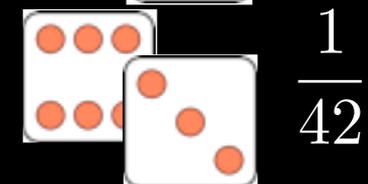

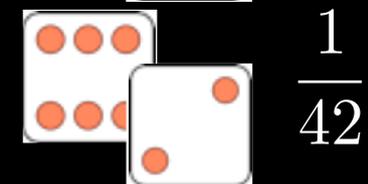

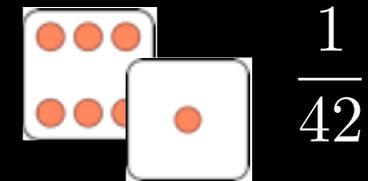

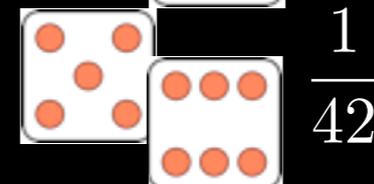

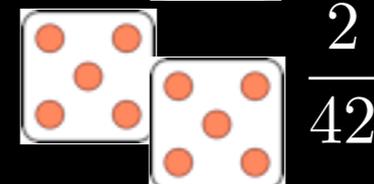

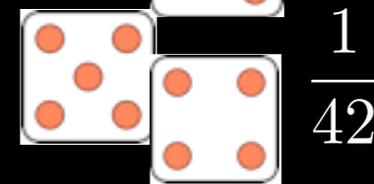

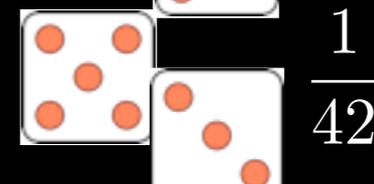

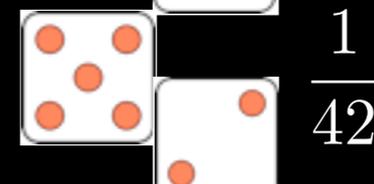

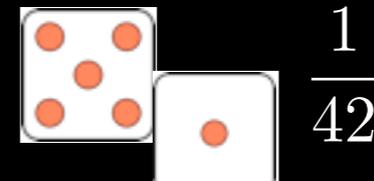

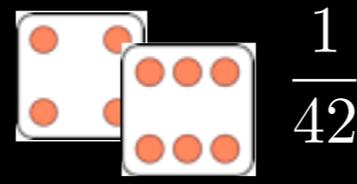

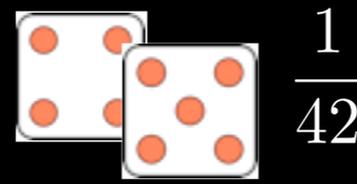

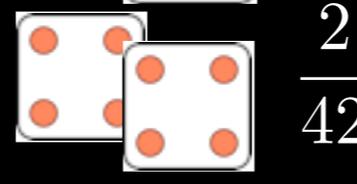

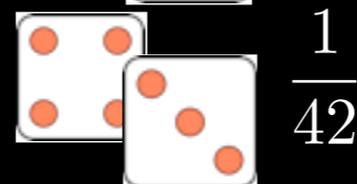

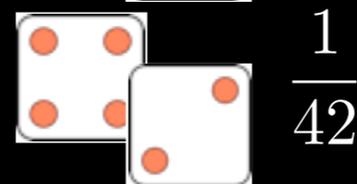

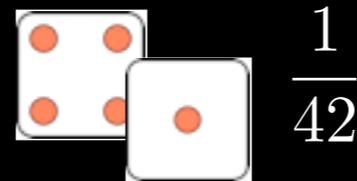

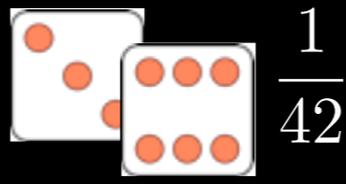

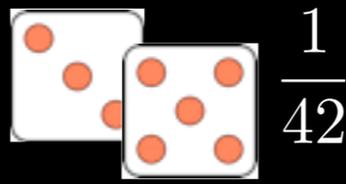

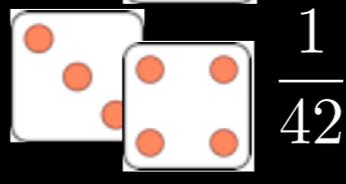

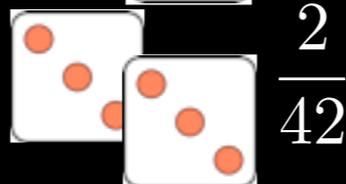

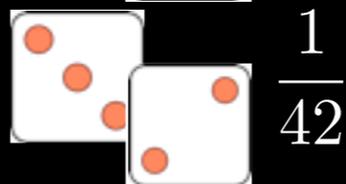

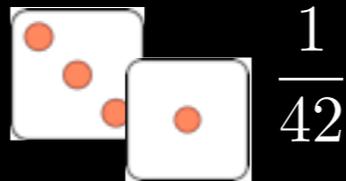

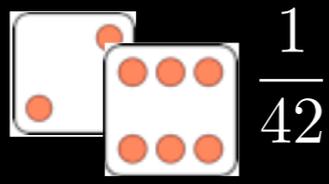

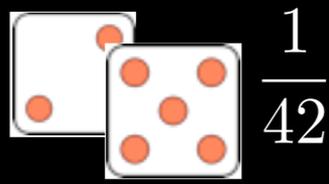

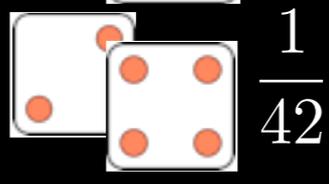

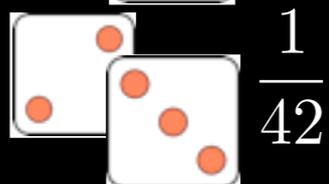

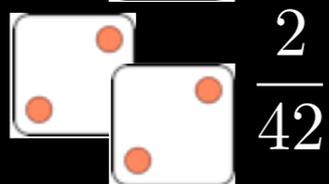

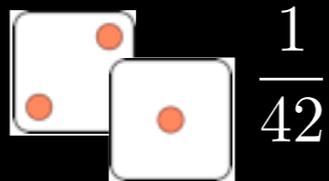

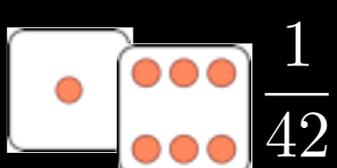

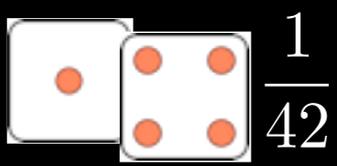

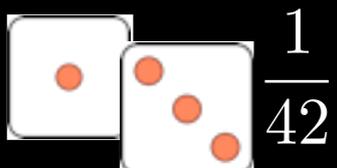

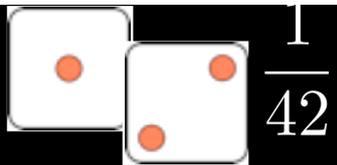

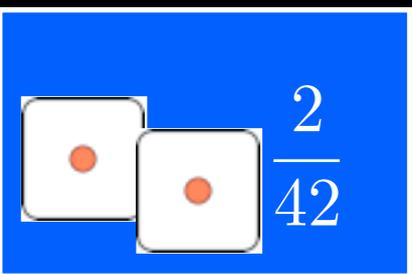

$$p(A = 1, B = 1) = p(A = 1, B = 1)$$

# Probabilistic Primer

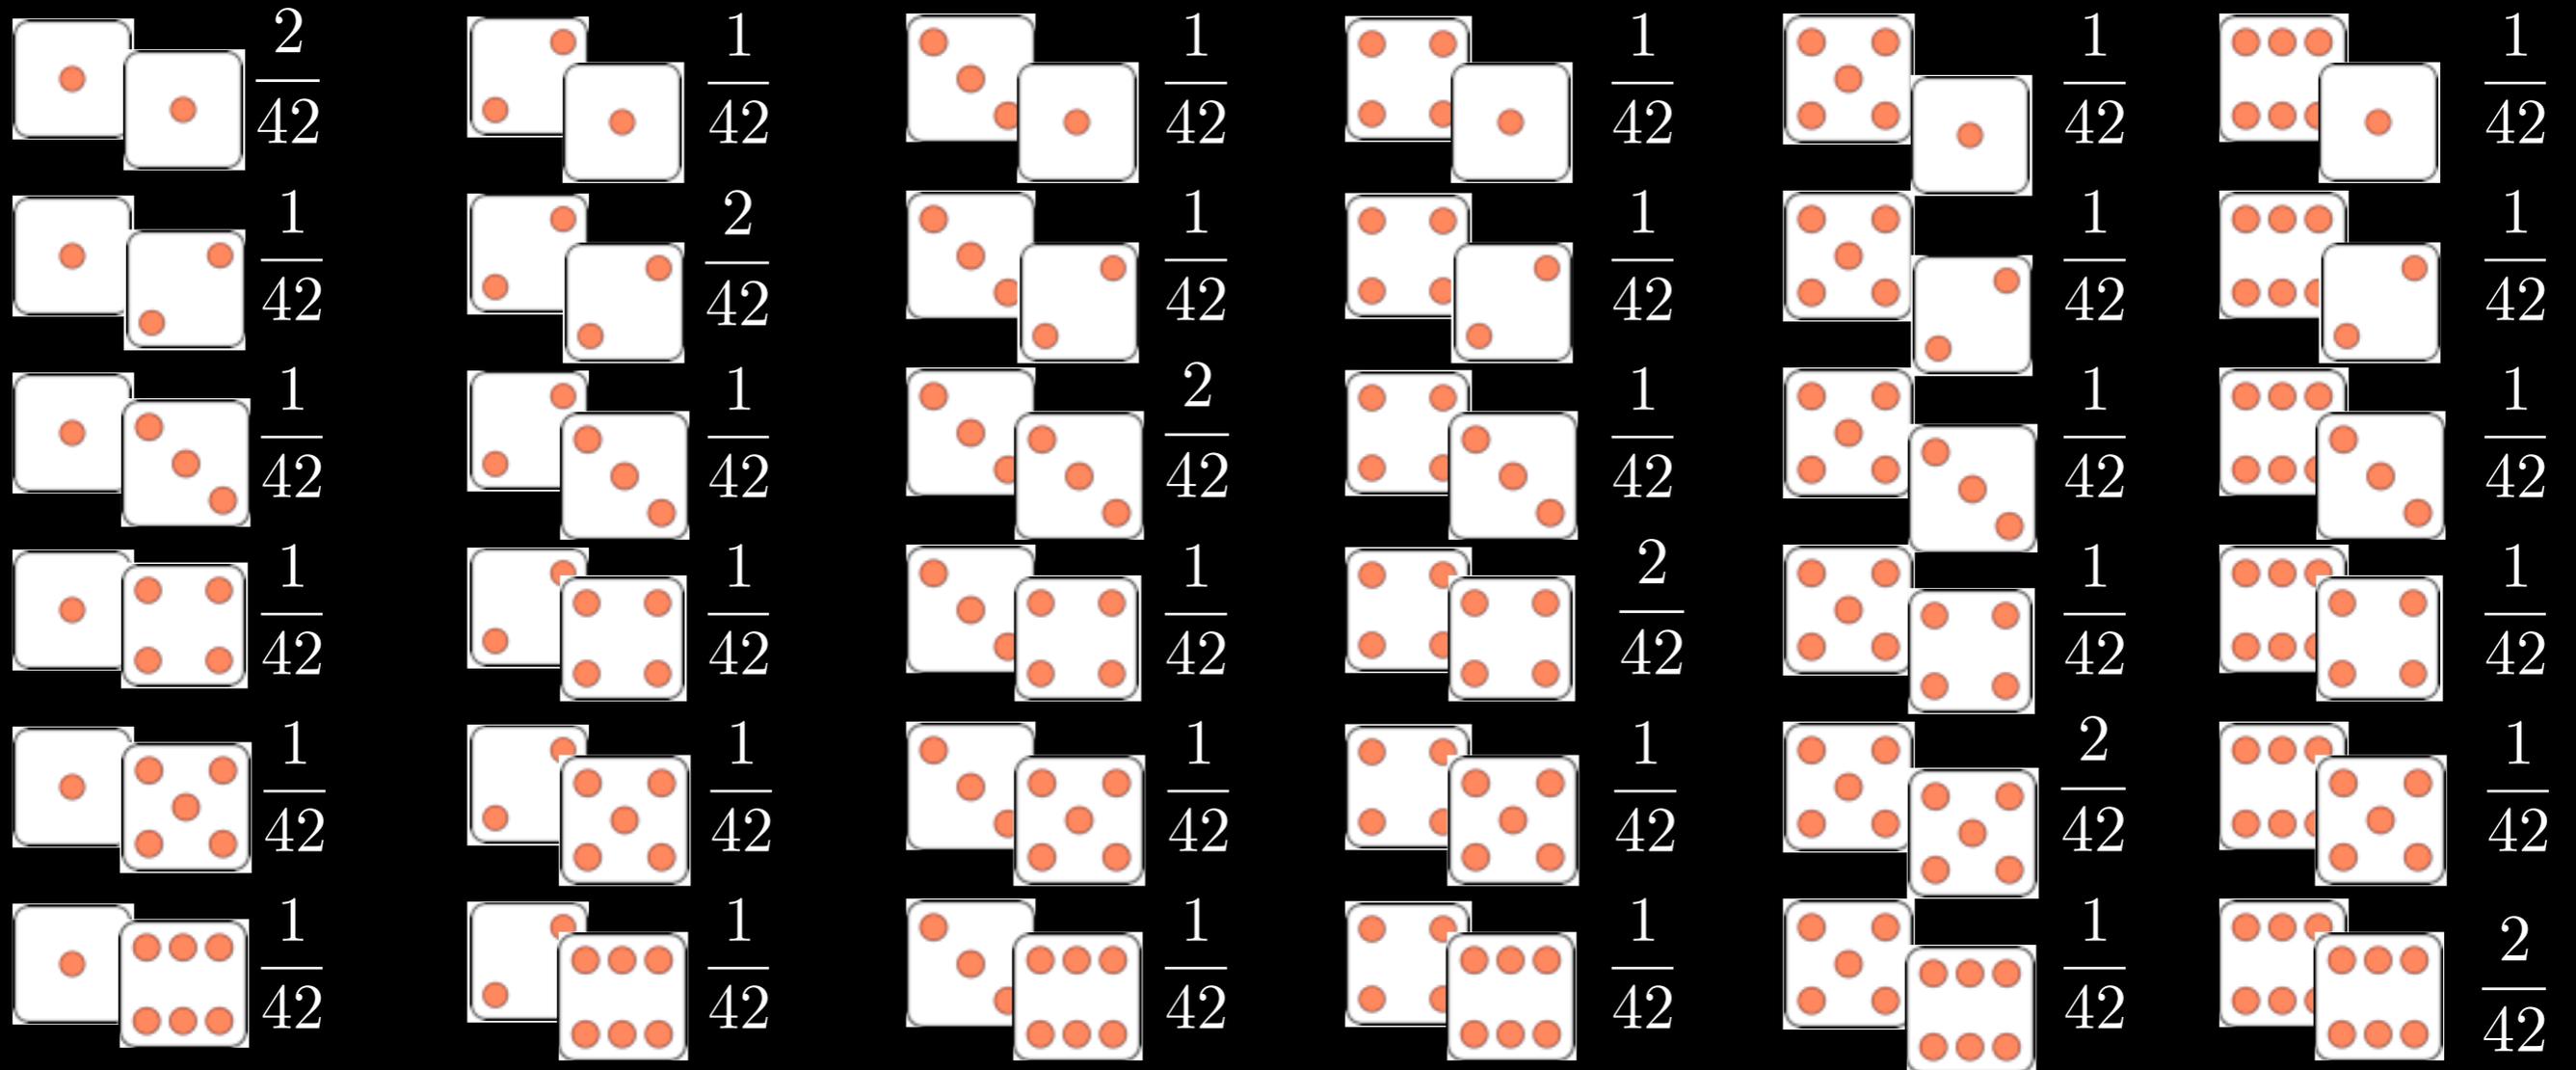

$$p(A = 1, B = 1) = \sum_{b \in B} p(A = 1, B = b) \frac{p(A = 1, B = 1)}{\sum_{b \in B} p(A = 1, B = b)}$$

# Probabilistic Primer

$$p(A = 1, B = 1) = p(A = 1) \cdot p(B = 1|A = 1)$$

# Probabilistic Primer

$$p(A, B) = p(A) \cdot p(B|A)$$

# Probabilistic Primer

$$p(A, B) = p(A) \cdot p(B|A)$$

# Probabilistic Primer

$$p(A, B) = p(A) \cdot p(B|A) = p(B) \cdot p(A|B)$$

# Probabilistic Primer

$$p(A) \cdot p(B|A) = p(B) \cdot p(A|B)$$

# Probabilistic Primer

$$p(B|A) = \frac{p(B) \cdot p(A|B)}{p(A)}$$

# Probabilistic Primer

Bayes' Rule

$$p(B|A) = \frac{p(B) \cdot p(A|B)}{p(A)}$$

# Probabilistic Primer

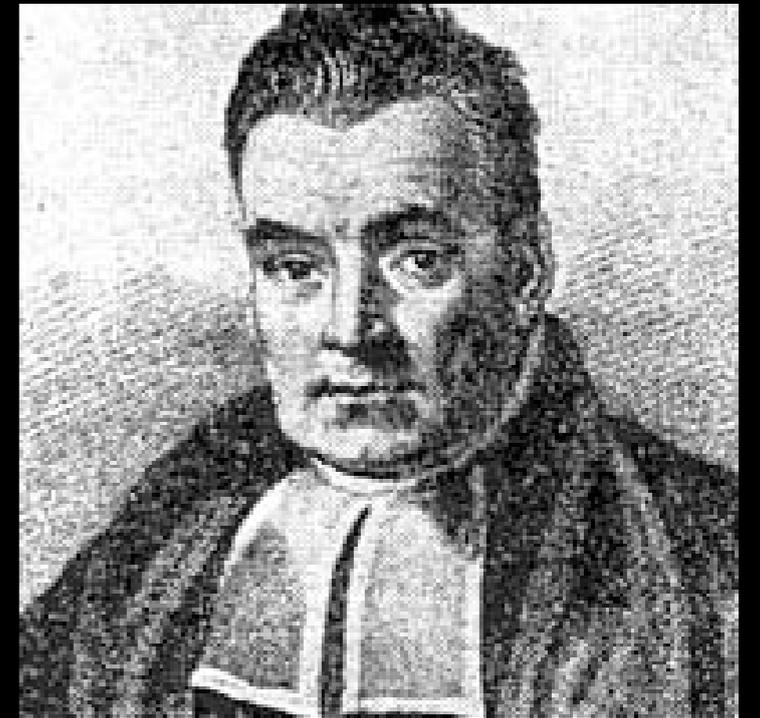

Bayes' Rule

posterior      prior      likelihood

$$p(B|A) = \frac{p(B) \cdot p(A|B)}{p(A)}$$

*...But the probability that an event has happened is the same as the probability I have to guess right if I guess it has happened. Wherefore the following proposition is evident: If there be two subsequent events, the probability of the 2d  $b/N$  and the probability both together  $P/N$ , and it being 1st discovered that the 2d event has also happened, the probability I am right is  $P/b$ .*

What is the probability of an English sentence?

# Machine Translation

$$p(\textit{English}|\textit{Chinese}) \sim$$

$$p(\textit{English}) \times p(\textit{Chinese}|\textit{English})$$

What is the probability of an English sentence?

What is the probability of a Chinese sentence, given a particular English sentence?

# Language Models

We can think of our probabilistic model as a story that explains every single word in the sentence pair.

# Language Models

$$p(\textit{However} | \textit{START})$$

# Language Models

However

$$p(\textit{However} | \textit{START})$$

# Language Models

However ,

$$p(, | \textit{However})$$

# Language Models

However, the

$$p(\textit{the} | , )$$

# Language Models

However , the sky

$$p(\textit{sky}|\textit{the})$$

# Language Models

However , the sky remained

$$p(\textit{remained}|\textit{sky})$$

# Language Models

However , the sky remained clear

$$p(\textit{clear}|\textit{remained})$$

# Language Models

$$p(\textit{English}) = \prod_{i=1}^{\textit{length}(\textit{English})} p(\textit{word}_i | \textit{word}_{i-1})$$

# Language Models

$$p(\textit{English}) = \prod_{i=1}^{\textit{length}(\textit{English})} p(\textit{word}_i | \textit{word}_{i-1})$$

Note: the prior probability that  $\textit{word}_0 = \textit{START}$  is 1.

# Language Models

$$p(\textit{English}) = \prod_{i=1}^{\textit{length}(\textit{English})} p(\textit{word}_i | \textit{word}_{i-1})$$

Note: the prior probability that  $\textit{word}_0 = \textit{START}$  is 1.

This model explains every word in the English sentence.

# Language Models

$$p(\textit{English}) = \prod_{i=1}^{\textit{length}(\textit{English})} p(\textit{word}_i | \textit{word}_{i-1})$$

Note: the prior probability that  $\textit{word}_0 = \textit{START}$  is 1.

This model explains every word in the English sentence.

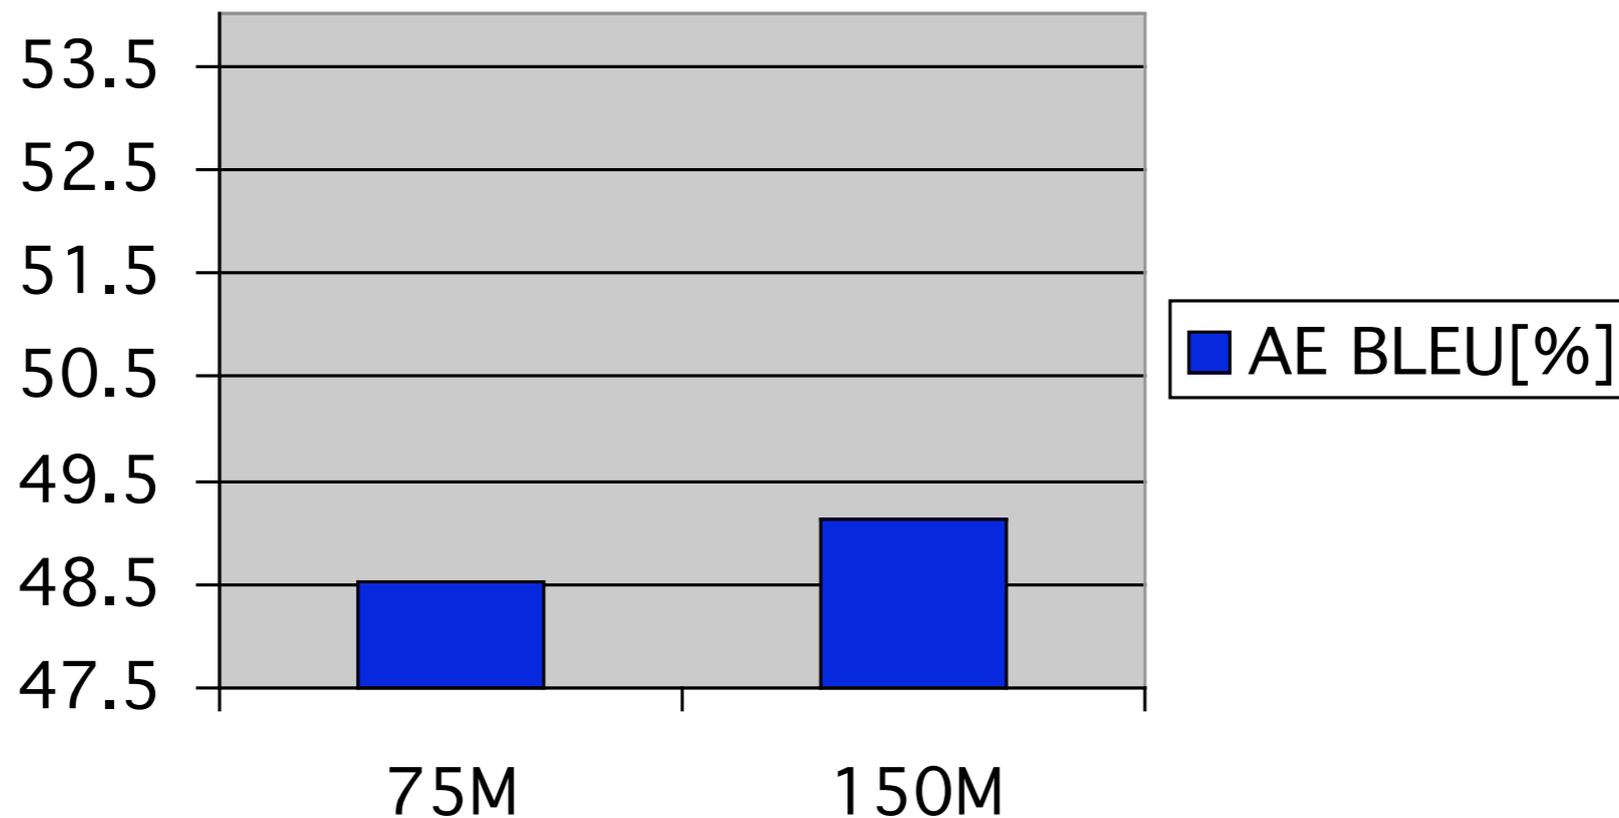

But it makes very strong conditional independence assumptions!

# Language Models

- The language model does not depend in any way on parallel data.
- How much English data should we train it on?

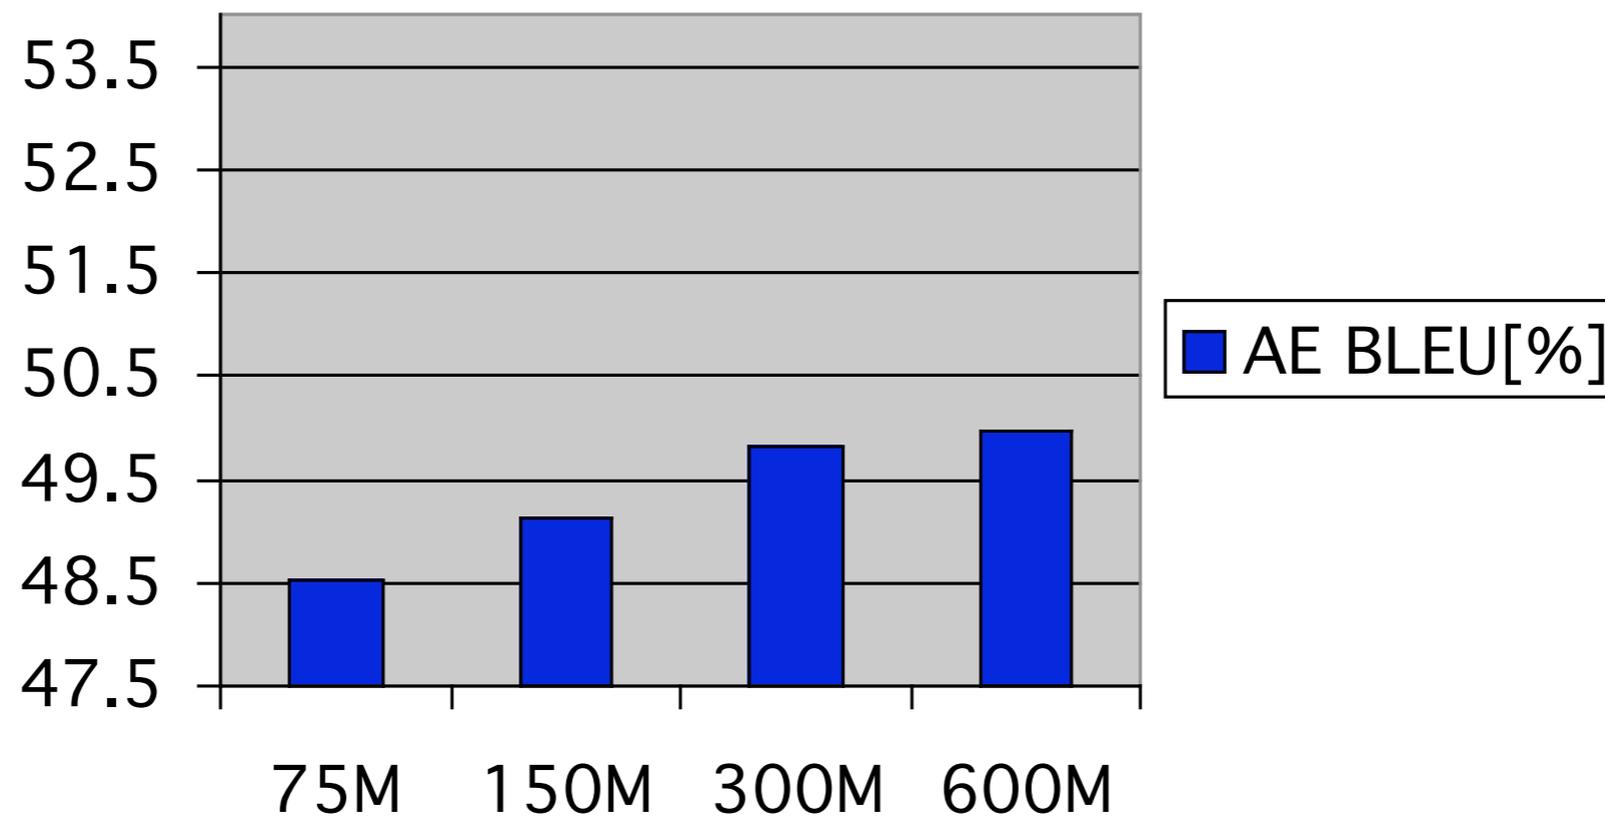

# Language Models

Impact on size of language model training data (in words) on quality of Arabic-English statistical machine translation system (NIST test data)

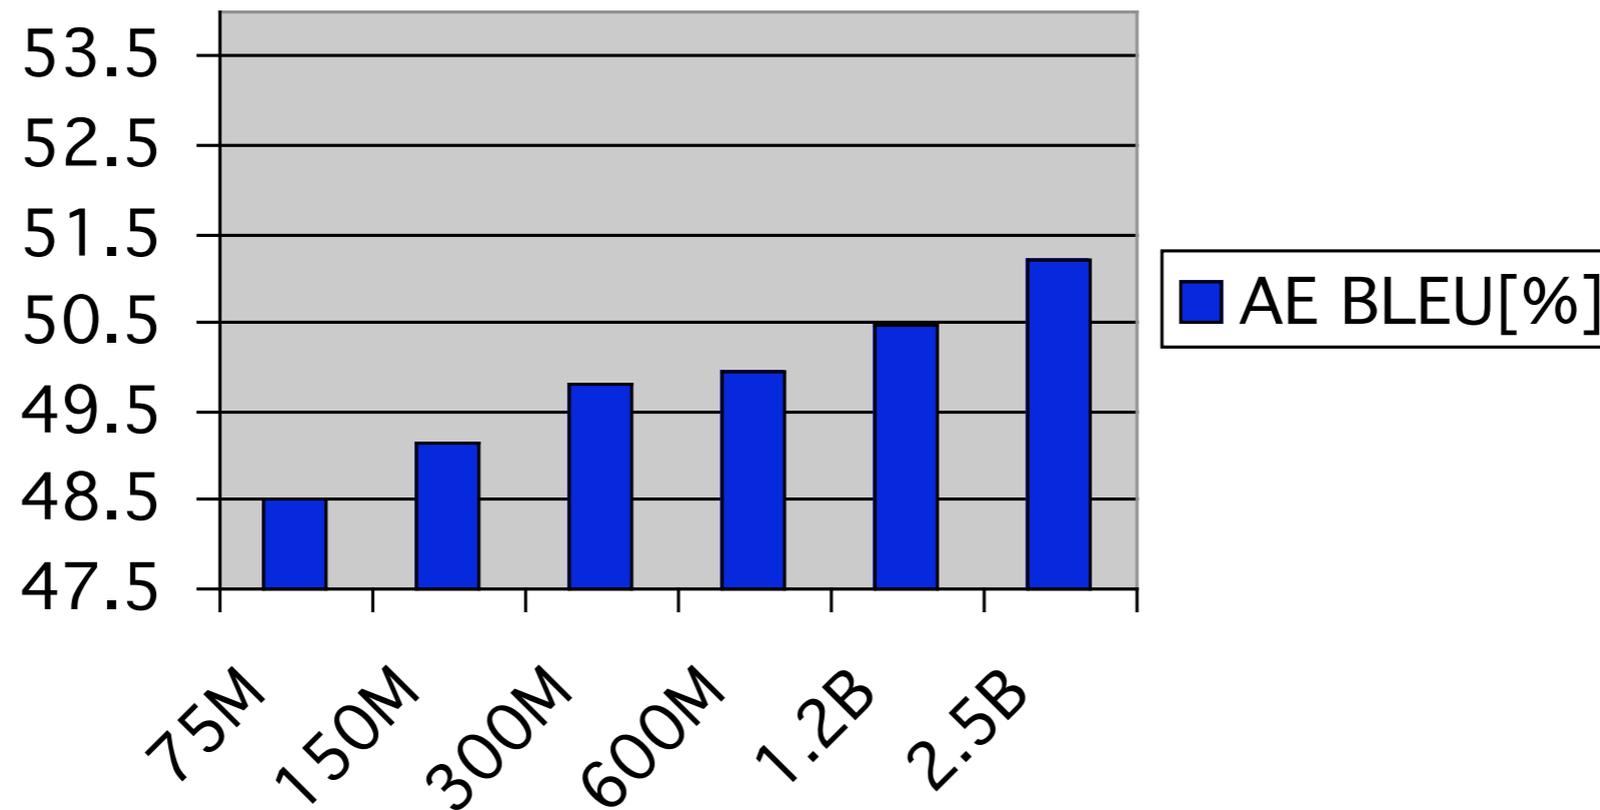

# Language Models

Impact on size of language model training data (in words) on quality of Arabic-English statistical machine translation system

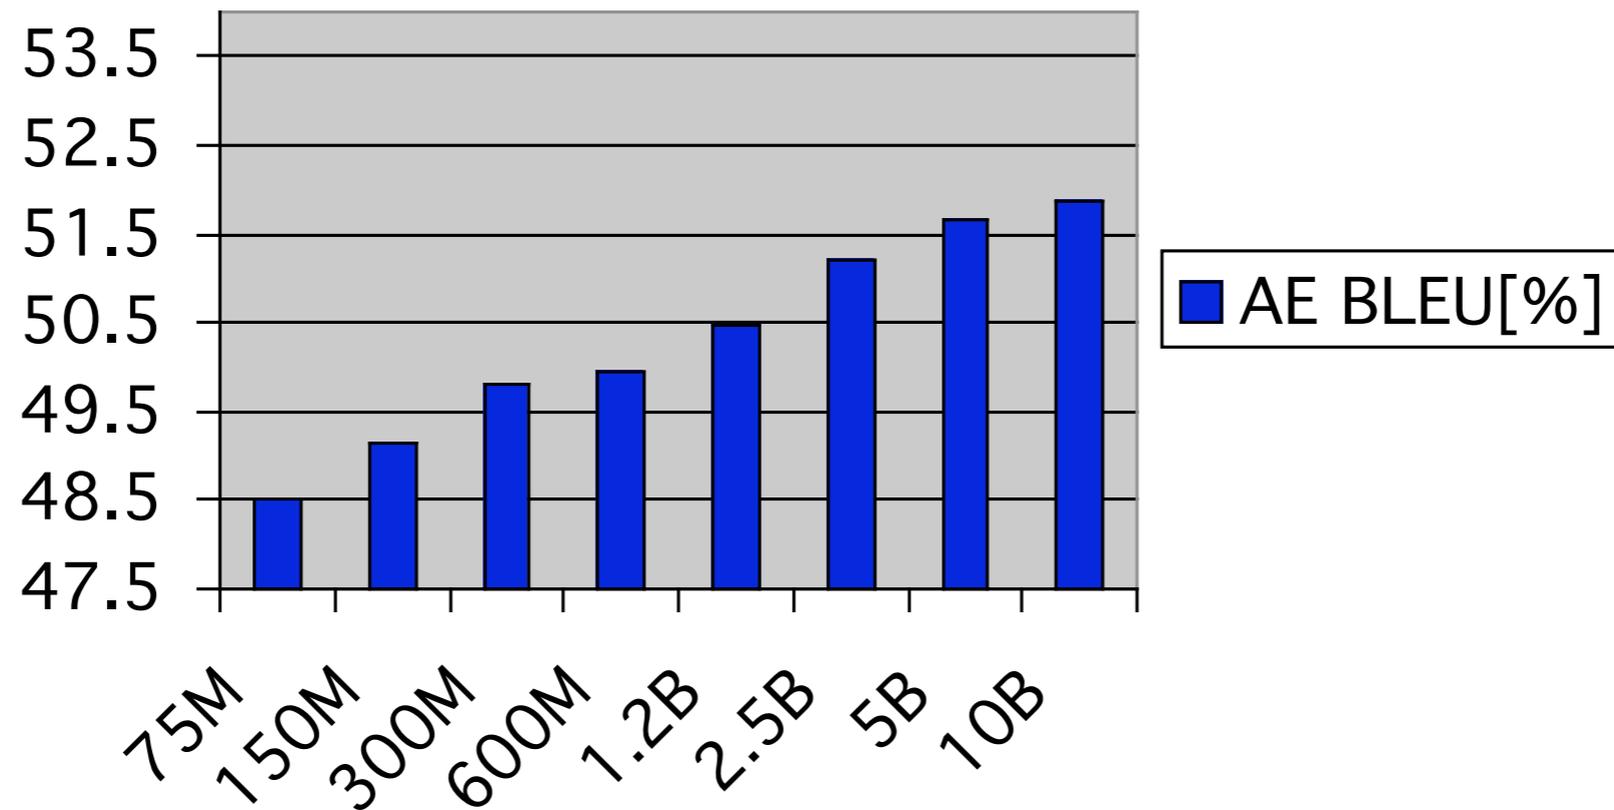

# Language Models

Impact on size of language model training data (in words) on quality of Arabic-English statistical machine translation system

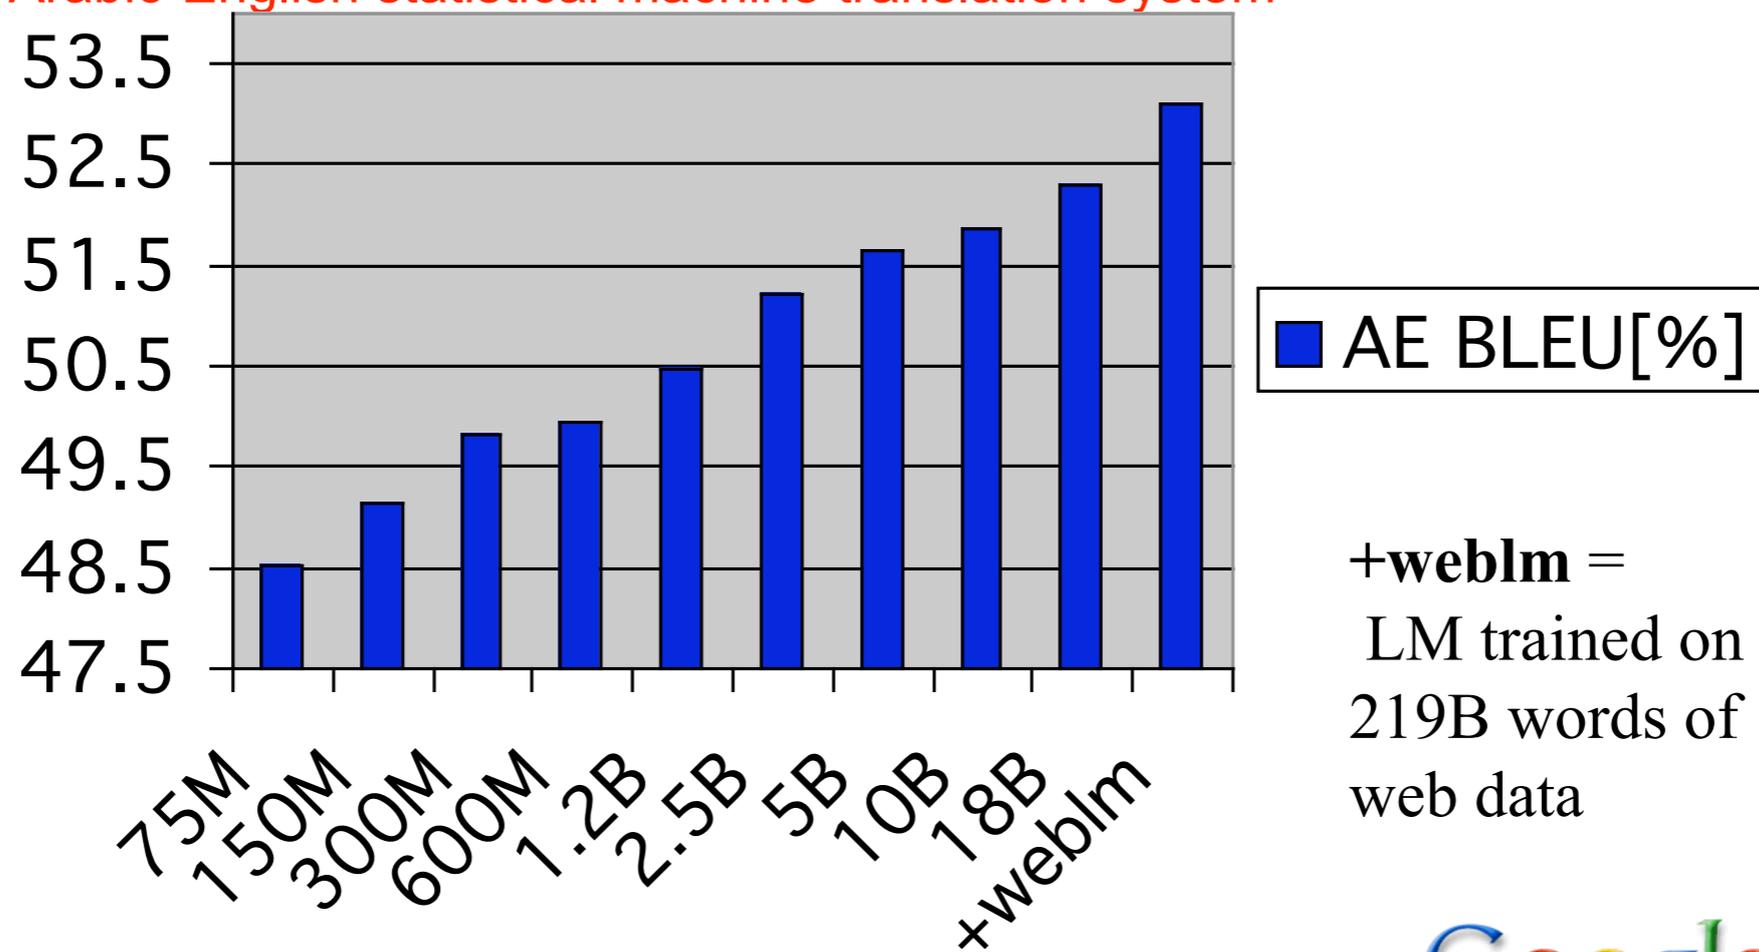

# Language Models

Impact on size of language model training data (in words) on quality of Arabic-English statistical machine translation system

# Language Models

Impact on size of language model training data (in words) on quality of Arabic-English statistical machine translation system

# Language Models

- There's no data like more data.
- Language models serve a similar function in speech recognition, optical character recognition, and other probabilistic models of text data.
- You'll learn a lot more about them from Nicola Bertoldi on Tuesday and Wednesday

# Translation Models

What is a good story about how a Chinese sentence came into being, given that we already have an English sentence?

# Translation Models

What is a good story about how a Chinese sentence came into being, given that we already have an English sentence?

Note: in this example I'll show you an English sentence, conditioned on a Chinese sentence. Note that we can apply the same technique in either direction.

*weighted finite-state automata*

Dynamic Programming

# Weighted languages

- The lattice describing the set of all possible translations is a *weighted finite state automaton*.
- So is the language model.
- Since regular languages are closed under intersection, we can intersect the devices and run shortest path graph algorithms.
- Taking their intersection is equivalent to computing the probability under Bayes' rule.

# Practical Issues

## ارتفاع عجز الميزان التجاري الأردني

قيمة الواردات الأردنية بلغت 7.39 مليارات دولار في النصف الأول من العام (الجزيرة نت)

أفادت بيانات رسمية بأن العجز في الميزان التجاري الأردني ارتفع في النصف الأول من العام الحالي بنسبة 18.1% نتيجة زيادة حجم الواردات مقابل الصادرات، كما تراجع حجم القروض الائتمانية التي قدمتها البنوك الأردنية بنسبة 11% خلال الفترة نفسها.

وقالت بيانات لدائرة الإحصاءات العامة نشرت اليوم الاثنين إن قيمة العجز في الميزان التجاري بلغت 2.79 مليار دينار أردني (3.94 مليار دولار أميركي).

وأشارت البيانات إلى ارتفاع حجم الصادرات خلال النصف الأول من العام بنسبة 16.6%، حيث بلغت 2.05 مليار دينار (2.91 مليار دولار)، كما ارتفعت قيمة الواردات بنسبة 11.7% لتبلغ 5.23 مليارات دينار (7.39 مليارات دولار).

**Value of Jordanian imports amounted to 7.39 billion dollars in the first half of the year (island Net)**

According to official statements that the trade balance deficit rose Jordan in the first half of this year by 18.1% due to increased volume of imports versus exports, as the decline in the volume of credit provided by banks of Jordan by 11% during the same period.

The data for the Department of Statistics published on Monday that the value of the trade balance deficit amounted to 2.79 billion Jordanian dinars (3.94 billion U.S. dollars). The data indicated the high volume of exports during the first half of the year by 16.6%, reaching 2.05 billion dinars (2.91 billion dollars), as imports rose by 11.7% to 5.23 billion dinars (7.39 billion dollars).

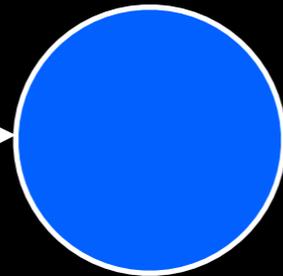

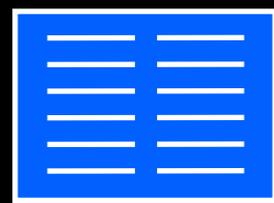

The export value increased significantly for the countries of the Greater Arab Free Trade, including Saudi Arabia, and the countries of the free trade agreement for North America, including the United States, as well as non-Arab Asian

## Statistical Machine Translation

ADAM LOPEZ

University of Edinburgh

8

Statistical machine translation (SMT) treats the translation of natural language as a machine learning problem. By examining many samples of human-produced translation, SMT algorithms automatically learn how to translate. SMT has made tremendous strides in less than two decades, and new ideas are constantly introduced. This survey presents a tutorial overview of the state of the art. We describe the context of the current research and then move to a formal problem description and an overview of the main subproblems: translation modeling, parameter estimation, and decoding. Along the way, we present a taxonomy of some different approaches within these areas. We conclude with an overview of evaluation and a discussion of future directions.

Categories and Subject Descriptors: G.3 [Probability and Statistics]: Statistical computing; I.2.6 [Artificial Intelligence]: Learning—Parameter learning; I.2.7 [Artificial Intelligence]: Natural Language Processing—Machine translation; I.5.1 [Pattern Recognition]: Models—Statistical

General Terms: Algorithms

Additional Key Words and Phrases: Natural language processing, machine translation

### ACM Reference Format:

Lopez, A. 2008. Statistical machine translation. *ACM Comput. Surv.*, 40, 3, Article 8 (August 2008), 49 pages. DOI = 10.1145/1380584.1380586 <http://doi.acm.org/10.1145/1380584.1380586>

### 1. INTRODUCTION

*Machine translation (MT)* is the automatic translation from one natural language into another using computers. Interest in MT is nearly as old as the electronic computer—popular accounts trace its modern origins to a letter written by Warren Weaver in 1949, only a few years after ENIAC came online.<sup>1</sup> It has since remained a key application in the field of natural language processing (NLP). A good historical overview is given by Hutchins [2007], and a comprehensive general survey is given by Dorr, Jordan, and Benoit [1999].

<sup>1</sup>This letter is reproduced as Weaver [1955].

This research was supported in part by ONR MURI Contract FCPO610548265, the GALE program of the Defense Advanced Research Projects Agency, Contract No. HR0011-06-02-001, and the EuroMatrix Project funded by the European Commission (6th Framework Programme). Any opinions, findings, conclusions, or recommendations expressed in this paper are those of the author and do not necessarily reflect the view of DARPA. This research was carried out while the author was at the University of Maryland.
