IBM Deployment of Real Time Translation Services

IBM T.J Watson Research Center

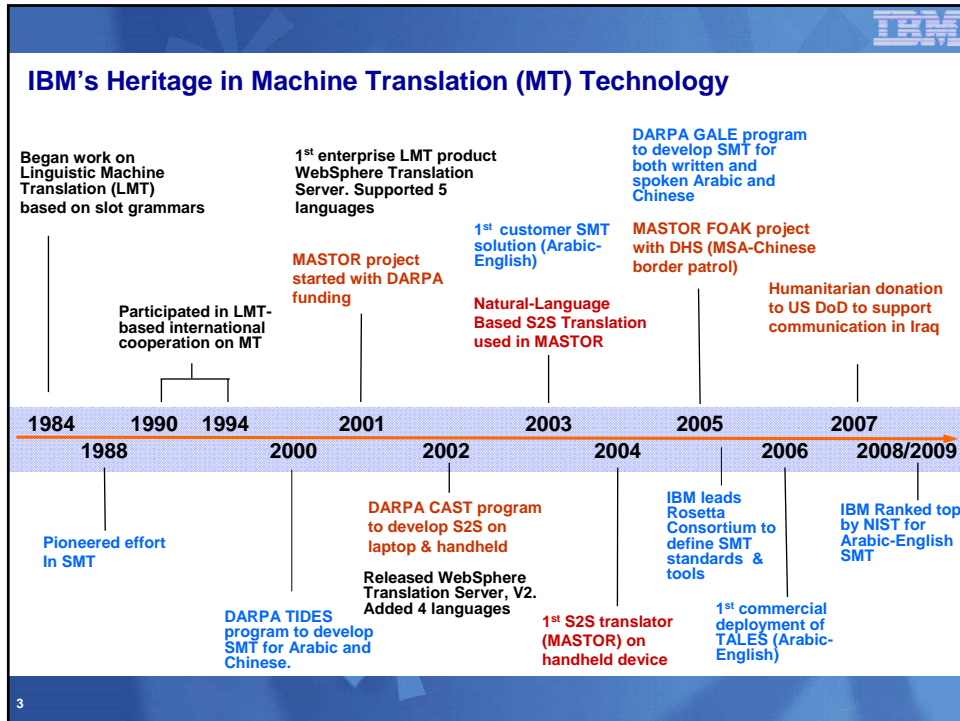

David Lubensky and Salim Roukos

davidlu@us.ibm.com, roukos@us.ibm.com

Machine Translation is a Key element of the Global Enterprise

- **What are the key questions with IT customers?**
 - How do I use technology to improve service, reduce costs and manage risk in my business? In other words, how do I make my IT resources as dynamic as my business --capable of adapting to my business needs?
 - That's what CEOs are looking for and that's where the money is

- **What's needed to succeed with MT inside the Global Enterprise**
 - Committed Senior Management
 - Pervasive, enterprise-wide support
 - Secure, customizable, extensible, enterprise-strength, real-time translation
 - Technology
 - Access to Data (parallel corpora, content, etc)
 - Lifecycle management

Global Enterprise and Next Generation of Business Transformation

- IBM
 - About 400,000 employees in more than 160 countries
- Linguistic Diversity
 - Not everyone speaks the same language
 - When properly harnessed... results in incredible strength
 - When left unattended... creates huge barriers
- Transforming the Global Enterprise
 - Improve Collaboration
 - Communicate in our native languages with other colleagues (and clients) using Instant Messaging, and Mobile devices
 - Mine/share business artifacts/knowledge from documents written in other languages
 - Browse/extract content from the web and/or knowledge bases in other languages
 - Reduce the cost of translation across the corporation
 - Impact IBM spent on Localization
 - Customer Support Portals
 - User/Community created content that is NOT in anyone's budget for Translation
- Status
 - We've started the Transformation

n.Fluent and Real Time Translation Services (RTTS)

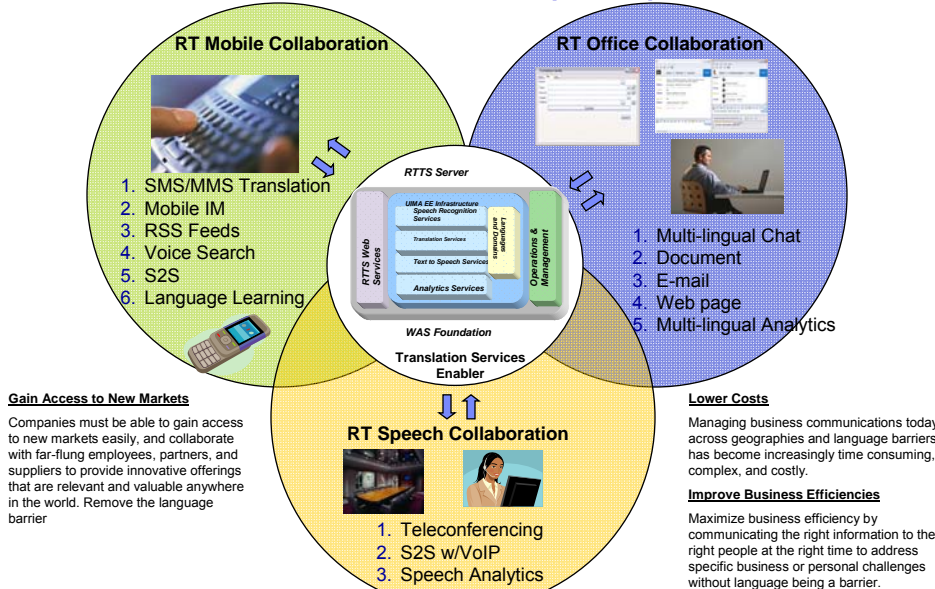

- RTTS is a 2006 InnovationJam project which created a platform for speech and text translation, developed by IBM Research
- The n.Fluent project is a partnership between the CIO Office and IBM Research to create Text Translation Services, started in June 2008 and sponsored by the IBM Executive Innovation & Value Team
- The n.Fluent project team is comprised of people from around the world – Watson Research Center, China Research and Development Labs, CIO Office, Tokyo Research Lab, Haifa Research Lab
- We are collaborating with many IBM organizations – Software, Services, and CIO office

5

Real Time Translation Services (RTTS) Suite

6

n.Fluent Overview

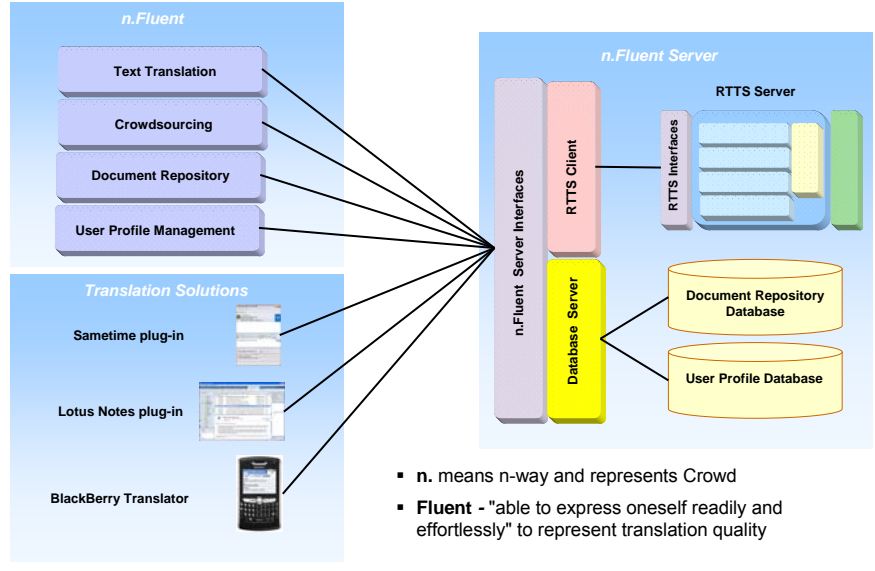

- Secure, enterprise-strength, real-time translation for the Global Enterprise
- n.Fluent Machine Translation Portal
 - Cut&PasteText
 - Web pages
 - Documents
 - Instant Messaging/Sametime chats (via a Sametime plug-in)
 - Mobile (BlackBerry and others) translation application
- Crowdsourcing – leverage 400K IBMers
- Language Pairs: English to/from Arabic, Simplified and Traditional Chinese, French, German, Japanese, Korean, Italian, Portuguese, Russian, and Spanish.

- APIs to RTTS and n.Fluent services allow other applications to access speech and translation services
- In the process of moving from the Technology Adaption Program (TAP) environment to a 24x7 supported environment

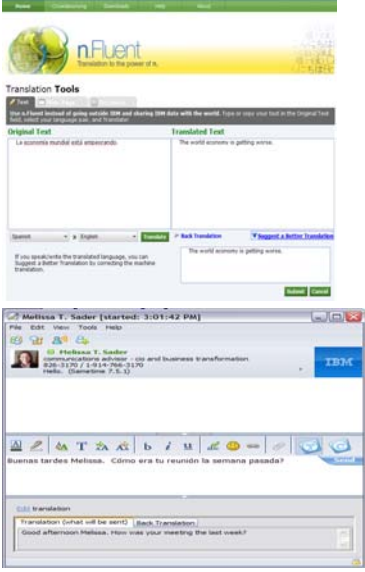

n.Fluent Translation System

- n.** means n-way and represents Crowd
- Fluent** - "able to express oneself readily and effortlessly" to represent translation quality

n.Fluent Text Translation Portal

The screenshot shows the n.Fluent web interface with a 'Translation Tools' section. Below it, a chat window for Melissa T. Sader is visible, showing a translation of a meeting summary from Spanish to English.

The screenshot shows the n.Fluent mobile application on a BlackBerry device. The interface includes a language selection menu (English to Chinese), a text input field with the query 'Where is the nearest chinese restaurant', and a 'Translate' button. The translated text is displayed in Chinese characters.

9

n.Fluent Activity / Usage

Activity	Current Totals
Registered Participants	2,720 users
Crowdsourcing (chat contributions)	4.2 M words
Crowdsourcing (translation)	125K words
Webpage translations	70 K
Number of words translated	27.5 M words
Downloads (IM plug-in, Mobile Translator)	2,900
Internal Deployments	8
Projects (in process)	6

Internal Deployments

- w3 News
- IT Help Central
- ThinkPlace
- SWG – Globalization
- SWG – Learning for Growth
- GBS Incentives Workplace
- ITS – Integrated MBP Delivery
- CHQ WW Expense Reporting

Current Projects

- IBM Support Portal
- SWG WPLC wikis
- TSC Post-editing with MT
- GBS – Contribute Asset
- Self Enablement Portal
- www.ibm.com

10

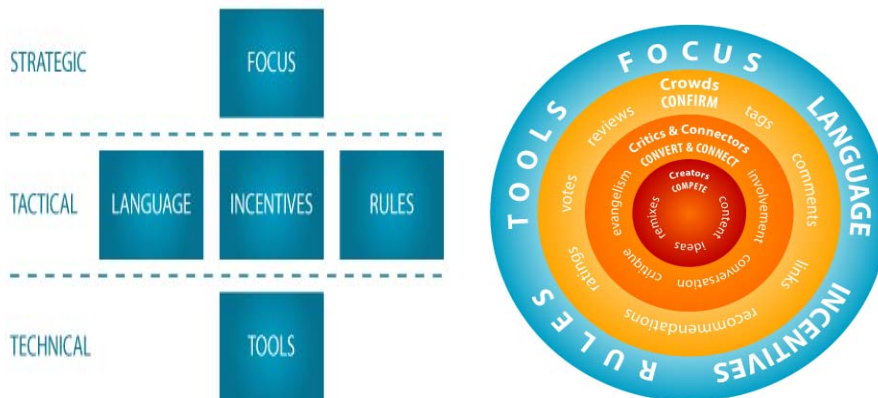

n.Fluent Activity – Words Translated by Language

Language	Text	Web Page	Document	Total
Arabic	264,670	87,280	511,695	863,645
Chinese - Simp.	268,424	326,814	85,895	681,133
Chinese - Trad.	116,602	0	14,077	130,679
French	2,559,907	2,442,525	448,969	5,451,401
German	1,773,058	1,645,675	3,413,085	6,831,818
Italian	1,303,723	1,053,644	1,545,856	3,903,223
Japanese	627,881	146,803	50,733	825,417
Korean	174,763	16,709	38,739	230,211
Portuguese	1,332,574	875,463	94,292	2,302,329
Russian	162,830	15,236	21,843	199,909
Spanish	2,153,684	2,233,352	1,034,423	5,421,459
Totals	10,738,116	8,843,501	7,259,607	26,841,224

Building a Crowdsourcing Community

The **FLIRT** model of Crowdsourcing (Sam Viitamäki 2007):

FLIRT = **F**ocus (align business needs/users); **L**anguage (Social objects/attracting); **I**ncentive (motivating/retaining); **R**ules (interacting); **T**ools (platform)

Crowdsourcing – Corporate Communication is key

- **Major Boost in participation - Mind Blowers w3 News article**
 - First in w3 news series that highlights IBM's innovation – 16K page views
 - n.Fluent new registrations = 949
- **What is the n.Fluent Language Translation Challenge?**
 - It's a worldwide, internal, online Crowdsourcing event in July'09
 - Goal is to drive Crowdsourcing volume to use as input to translation improvements
 - In return, top individual and language group contributors will be recognized with monetary donations to a charitable organization

SMT-Based Technologies Increases Accuracy through 'Domains'

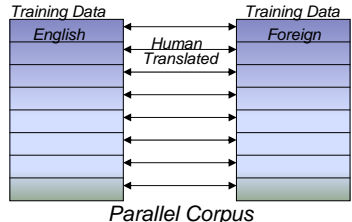

Domain: Topic of conversation that the translation engine will recognize and translate

Custom domains are created by enhancing a broad base domain, and must be created for each language pair

An SMT domain model is based on a 'parallel corpus'

Domain Examples:

Military	Custom	IT Help
Travel	Medical	Commerce
Conversational Adaptations		
Base Domains (News)		

Parallel Corpus

Domain Model creation is an iterative process

Domain Model Creation Steps

Collect

1. Collect training data in both languages

Clean

2. Review and 'clean' the data

Translate

3. Translate each sentence to the other language to create the parallel corpus

Build

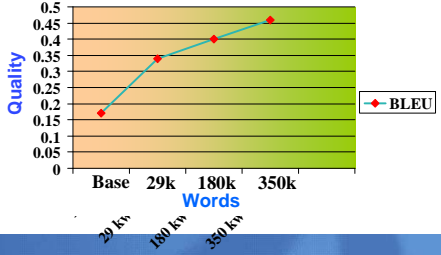

4. Execute the model building tools to create the statistical models

Test

5. Test the created models

6. Repeat 1-5 refining models and improving weakness identified during accuracy testing

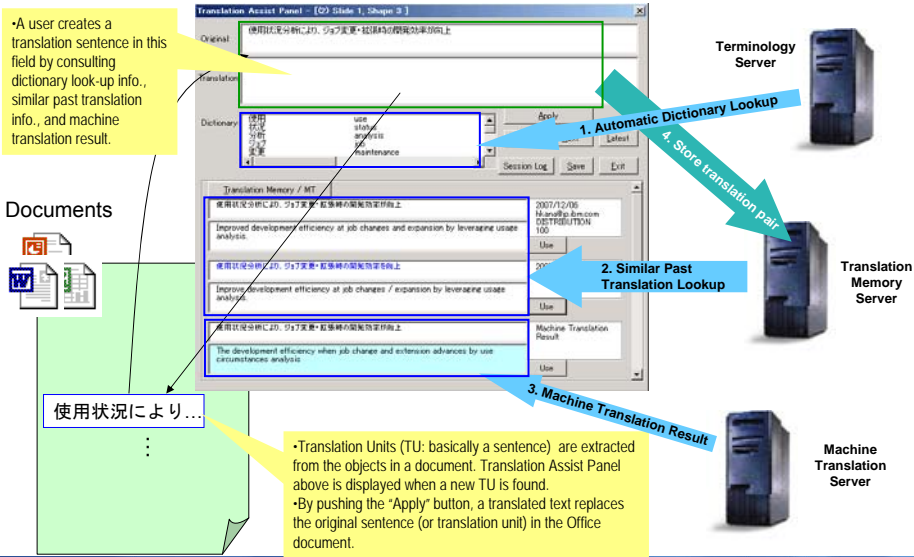

The quality / size of the domain model directly impacts the translation quality

Words	BLEU Score
Base	~0.15
29k	~0.35
180k	~0.42
350k	~0.48

Translation Assist Tool (TAT)

Next steps/Roadmap

- **Continue to deploy n.Fluent across the Global Enterprise**
 - Customer Support Portal (both internal and external content)
 - Localization
 - Enable Translation on the Internal websites (100M internal webpages)
 - Leverage Translation as part of multilingual analytics (Smarter Planet)
- **Continue to drive improvements in MT – leveraging the multilingual workforce to contribute conversational data via Instant Messaging and crowdsourcing**
- **Streamline vertical customization process**
- **Develop additional languages**
